

APPENDIX 2-C

Local Engagement and Outreach

Please join AES for an Open House for the Somerset Solar Project, a 140 – 200 megawatt solar energy project proposed to be located at the former Somerset Coal Power Station.*

AES looks forward to meeting with the community to introduce the project, to discuss the 94-c permitting process, and to answer questions about this development.

Date: Wednesday, June 16th

Times: 1:00pm – 3:00pm and 5:00pm – 7:00pm**

Location: Barker Firehall, 1660 Quaker Road, Barker, NY 14012

Light refreshments will be provided.

RSVP: Please RSVP on the project website so we can get an accurate headcount. Registration is requested but not required. <https://www.aes.com/somerset-solar-project>

*Due to the ongoing COVID pandemic, AES asks all participants, whether vaccinated or unvaccinated, to adhere to the NYS guidelines for masking and social distancing.

**The material and information will be the same at both times.

Accelerating the future
of energy, **together.**

Somerset Solar Project Open House*

Please join us for an Open House for the Somerset Solar Project, a 140 - 200 megawatt solar photovoltaic electric generating facility proposed to be located at the former Somerset Coal Power Station.

AES looks forward to meeting with the community to introduce the project, to discuss the 94-c permitting process, and to answer questions about this development. Please note, the same material will be covered in both sessions.

Date: Wednesday, June 16th

Time: 1 pm - 3 pm, and/or 5 pm - 7 pm

Location: 1660 Quaker Rd., Barker, NY 14012

Light refreshments will be provided.

RSVP: Please RSVP on the project website so we can get an accurate headcount. Registration is requested, but not required to attend. www.aes.com/somerset-solar-project

Subject: AES Postcard order for Somerset Solar Open House notification

Good morning!
Thanks again for helping us with this!

Here is what we need for this first class postage printing and mailing order:

1. Mailing list for all households within a 1.25 mile radius of the Somerset Coal Plant
 - a. Address: 7725 Lake Road, Barker, NY 14012
 - b. As I'm looking at the map, I realize that google maps puts the dot for the address way back from Lake Road -closer to the and that might affect which houses are within a 1.25 mi radius. Some of the land for the project is on the south side of Lake road (owned by the coal plant) which is why I bring it up.
2. Postcards printed and mailed to each of the house/residences/places on the address list - Postcard attached.
3. A copy of the mailing list - not to be used by us - just to be reviewed
4. If this can be done by today (thursday), or tomorrow/Saturday at the latest, that would be fantastic.
5. Please send me the invoice

Thanks Ken!

Subject: FW: list please

USE CAUTION: External Sender

Hi Neely,

Here is your updated list with 3 miles out!. This list has a total of 751 records.

its bigger than you thought – however its better safer than sorry to hit everyone.

This would qualify for bulk rate at this qty. so it would not be double the cost as postage is cheaper bulk rate.

Instead of \$600 – it would be closer to \$488.00 to hit all of these plus the list and addressing fee

Thank you

Thx!

Ken

A newspaper published in the County and State aforesaid,
and that the annexed printed legal # 285242
was printed and published in said paper on the following dates:

06/12/2021 06/15/2021

Principal Clerk

Subscribed and sworn to before me this

6-16-21

Teresa L McCarthy 02/26/2022

Notary Public Expiration Date

TERESA L MCCARTHY
NOTARY PUBLIC, STATE OF NEW YORK
Registration No. 01MC4962698
Qualified in Niagara County
Commission Expires February 26, 2022

Please join AES for an Open House for the Somerset Solar Project, a 140 - 200 megawatt solar energy project proposed to be located at the former Somerset Coal Power Station.*
AES looks forward to meeting with the community to introduce the project, to discuss the 94-c permitting process, and to answer questions about this development.

Date: Wednesday, June 16th
Times: 1:00pm - 3:00pm and 5:00pm - 7:00pm**
Location: Barker Firehall, 1660 Quaker Road, Barker, NY 14012
Light refreshments will be provided.
RSVP: Please RSVP on the project website so we can get an accurate headcount. Registration is requested but not required. <https://www.aes.com/somerset-solar-project>

*Due to the ongoing COVID pandemic, AES asks all participants, whether vaccinated or unvaccinated, to adhere to the NYS guidelines for masking and social distancing.

**The material and information will be the same at both times.

Dalmas R. "Dale" Weese, Sr., 61, of Albion died June 4, 2021 in his home surrounded by his family, following a long illness. He was born July 21, 1959 in Gassaway, WV to Harry and Olive (Starcher) Weese and had lived in this area for most of his life. Dale loved to hunt and fish and had a great sense of humor. He was an avid coin collector, very good cook, and homemade wine maker. His greatest joy was spending time with his grandchildren. Mr. Weese was predeceased by a daughter, Lisa Weese; brothers: Danny, Denver, Dayton, Harry Weese; sisters: Bessie "Marlene" Horch, and Marylou Smith. He is survived by his wife of 41 years, Colleen; children: Dalmas Jr. (Jennifer) Weese and Kristina (Kevin) Ginger both of Albion; brothers: Dencil (late Erma) Weese of Waterport; David (Kathleen) Weese, Donnie Weese, Douglas Weese all of Lyndonville; sisters: Joann (Doug) Keiffer of Lyndonville, Jackie (Kenneth) Davis of Waterport, 14 grandchildren, 2 great-grandchildren; close family friend, Debbie Ashe; his beloved dog, "Charlie;" as well as many nieces and nephews. The family received friends at the Christopher Mitchell Funeral Homes, 21 West Ave., Albion, Wed., June 9. His funeral service followed. Interment will be held at the convenience of the family. In lieu of flowers memorials may be made to the National Kidney Foundation, 30 East 33rd St., New York, NY 10016. To share a special memory of Dale, please visit: www.mitchellfamilyfuneralhomes.com

Glenn E. Woolston, 91, of Waterport died May 29, 2020 following a long illness and a result of COVID-19. Glenn was a member of the Gaines Congregational Church and lifetime member of the Carlton Fire Co. He was co-owner of Cedar Valley Lodging for 33 years. Glenn was one of the founding members of Gaines Valley Airport and volunteered his time with the Young Eagles Flyers Club. A Celebration of Glenn's life will be Sun., June 20, 2021 at 2 p.m. at the Carlton Rec Hall, 1853 Oak Orchard Rd., Albion, NY 14411. Glenn's arrangements have been entrusted to the Christopher Mitchell Funeral Homes, Inc. Albion. To share a special memory of Glenn, please visit www.mitchellfamilyfuneralhomes.com

Hi Ben,
Thank you so much for reaching out about the Somerset Solar Open House.

Our Director of Development, Mike Farrell (Cc'd on this email) will give you a call tomorrow, Thursday June 10th, around 2:30, if that works for you? If it does not, can you send me times that work better?

Thanks again,
Neely

Hello,

My name is Benjamin Joe and I am a reporter for the Lockport Union-Sun & Journal in Lockport, NY – close to Somerset.

We recently learned of an open house for the Somerset Solar Project. We'd like to advance and possibly attend the event.

This open house is the first we've heard of news about the Somerset Coal Power Station since it was decommissioned shortly before COVID-19 broke out. If at all possible, I'd love to talk to one of you before the open house and get some information about what is being done with the former coal burning plant. Is it also going to house a renewable energy powered Google data center such as the one in Virginia, or is the project feeding into the transmission line that power parts of New York's energy grid?

My number is 17163902691 if its more convenient to call. I understand Lora is out of the office this week, and was told Cat may be in a position to speak on the project.

Looking forward to speaking with you both. Thanks, Ben

Somerset Solar Project Overview

- **Nameplate Capacity:** 140-200 MW solar
- **Location:** Town of Somerset, Niagara County, NY (site of former Somerset coal power station)
- **Point of Interconnection:** Sub-station on-site
- **Project Footprint:** ~1,000 acres
- **Environmental Impact:** Reduce CO₂ emissions by ~182,500 metric tons per year (equivalent to powering ~33,000 homes' electricity use per year)
- **Community Investment:** AES is committed to developing, owning, and operating Somerset Solar over the life of the project

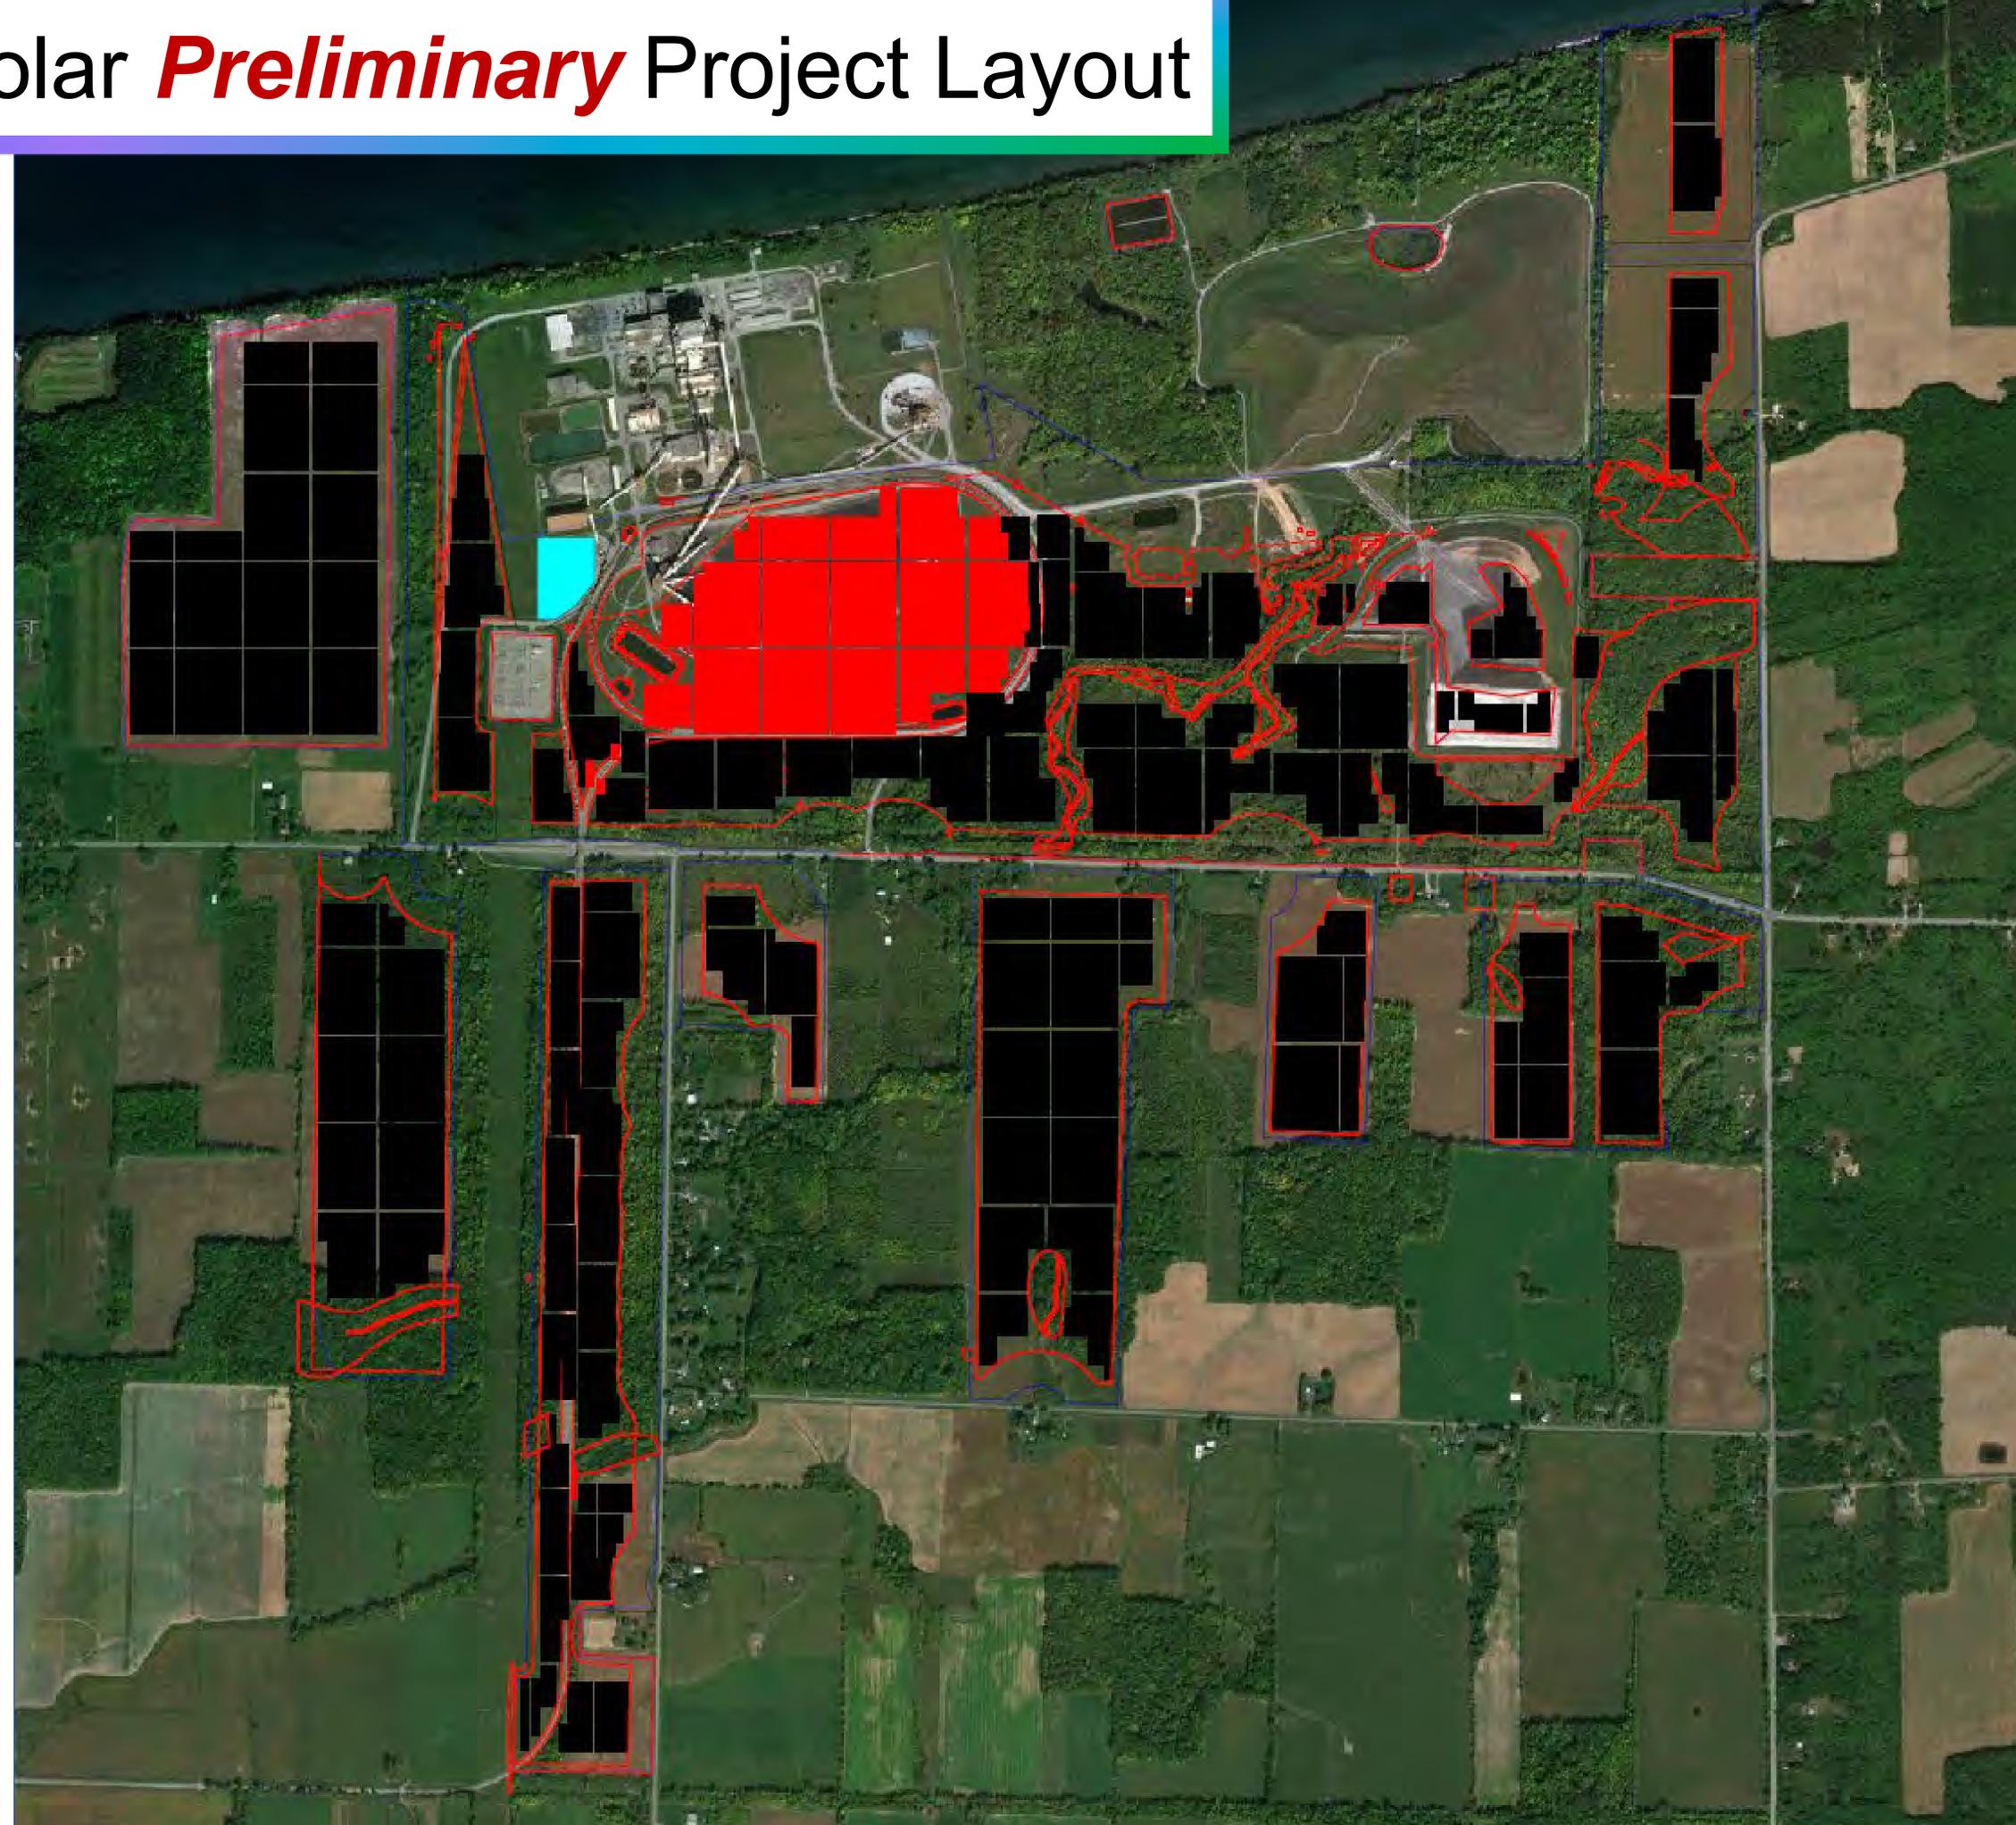

Project Benefits

- Beneficial re-use of the coal site & existing electrical infrastructure
- ~\$200 million in capital investment
- Long-term tax revenue
- Host Community Agreement (HCA) with Town of Somerset
- 150+ jobs during construction
- 2-3 full-time equivalent jobs
- Increased local spending
- School curriculum support (STEM)

25. Other Permits and Approvals

Community Engagement

- We are committed to community, accessibility and communication, and view engagement as a two-way street!
- You can contact us via our:
 -  **Toll-free number: [866-757-7697](tel:866-757-7697)**
 -  **Project Email: somerset-solar@aes.com**
 -  **Project Website: www.aes.com/somerset-solar-project**
- **Virtual Office Hours** via our toll-free number: 866-757-7697
 - Mondays: 11am - 1pm
 - Thursdays: 4pm - 6pm
 - If you call outside of these hours, we will return your call ASAP

Environmental Studies

Completed:

- Wetland and waterbody delineations
- Wintering raptor surveys
- Wildlife site characterizations

Ongoing:

- Grassland breeding bird surveys
- Phase 1 environmental site assessments

TBD:

- Architectural history surveys (above ground)
- Archaeological phase 1A/1B surveys

 Accelerating the
future of energy,
together

33 people in afternoon session + 24 during evening session + 8 people counted who did not sign in = 65 Total Attendees

All attendees who signed in received a follow up call, email or mailed postcard following the event.

Those in attendance on behalf of AES:

1. Mike Farrell (AES)	2. Neely Kelley (AES)
3. Brett Hastings (AES)	4. Musa Wafula (AES)
5. Eric Will (AES)	6. Mike Sagan (AES)
7. Jack Donelan (AES)	8. Chris Wentlent (consultant)
9. Andrew Gordan (AES)	10. Jim Muscato (Young Sommer)
11. Mario Rice (AES)	12. Drew Lent (Tetra Tech)
13. Brittany Zamborsky (AES)	14. Kayla Gagnon (Tetra Tech)
15. Josh Baird (AES)	16. Cassie Travers (Tetra Tech)
17. Stephanie Hince (AES)	18. Jodi Hunt (Tetra Tech)

June 16, 2021 Somerset Open House: Event Summary + Follow Up

This open house event did not include a formal Q&A session. Please find below a summary of the most common questions & concerns expressed at this meeting, and AES responses:

1. What is the relationship of sPower, AES, and the proposed data center?

The Somerset Solar project began development under sPower in 2020. In January 2021, sPower was merged into AES, along with all projects under development. AES does not own the land on which the coal plant currently stands, we will be leasing the land for the solar project. AES and the Somerset Solar project have no relationship with the proposed data center. The only connection is that both the solar project and the data center are planned to be on land owned by the Somerset Operating Company.

2. Questions/concerns about battery energy storage

We will be working directly with the local EMS and fire departments to be prepared in the rare event of a battery-related safety event, but we also have comprehensive and redundant monitoring and safety programs in place for these storage facilities. One of the companies that AES Clean Energy is in close partnership with, Fluence is a world-leader in battery installation, and we are very aware of working with our battery suppliers on safety and safety requirements, which have improved significantly over the years. While the risk of fire is very low, we will be acutely monitoring this risk for the life of this storage system. This battery equipment will be located near the other electrical equipment required for a solar facility, which is equipment that is especially restricted, distanced and located within the fenced Project Area to ensure safety.

3. Concerns about viewshed

We will be implementing vegetative screening around the perimeter of the project and abiding by all 94-c setbacks. If you have site-specific concerns about viewshed, please reach out to us directly and one of our team members will be happy to converse with you and visit your property if desired.

4. Concerns about the proximity of the project to the Babcock House

AES understands that the Babcock House is an important local cultural and historical establishment and is committed to communicating with the Somerset Historical Society to develop Somerset Solar in a responsible way that is minimally impactful to the Babcock House.

5. Concerns about solar panels being sited on farmland

Roughly half of the Somerset Solar project will be sited on the property of the former Somerset Coal Plant. The other portion of land that will comprise the project area is privately owned, we have entered into agreements with willing landowners for use of their land.

Feedback Forms Summary:

At the open house, feedback forms were available, containing the following questions. 11 completed forms were received. Here is a summary of the responses:

1. *Did the event meet your expectations?*
 - a. Yes – 9
 - b. No – 2
2. *What went well?*
 - a. Lots of staff, conversation with Mike S., nice/polite presenters, informational, q's were answered, visuals were provided
3. *What could have been better?*
 - a. More hard data/details, an actual presentation to the whole group, public Q&A that all can hear, roads labeled clearly on the map, better explanation of the map
4. *Anything else?*
 - a. Questions:
 - i. What is the max height of the panels?
Response: *Panels are typically 10-12 feet tall at a maximum.*
 - ii. Property values impacted?
Response: *There are multiple studies that have been conducted analyzing property values of properties near commercial solar projects. Each study analyzes property value impact with different research methodologies and in different regions of the country. To date, there have been no studies about impact of commercial solar projects on nearby properties in NY or rural NY. Studies conducted elsewhere have consistently found no impact of commercial solar installations on property values. [This handout](#) from SEIA contains some more information on the topic, and references some of the studies that have been conducted on this topic.*
 - iii. Will you utilize local union labor?
Response: *We will hire local wherever possible and will pay prevailing wages.*
 - b. Comments:
 - i. Environmental studies are inaccurate
 - ii. Information was vague/generic, more detail desired
 - iii. Home rule should prevail – public referendum is the only way to determine acceptance
 - iv. Not in favor of the project
 - v. Panels should not be put on tillable farmlands and wetlands should be 100% avoided

Feedback Forms (Names + contact info removed):

1. Did the Somerset Open House meet your expectations? (circle one)

Yes No

2. What went well?

lots of staff

3. What could have been better?

Real data not happy
talk & happy posters

4. Please share any additional questions, thoughts, suggestions, with us.

- Environmental studied complex
are inaccurate!

1.

1. Did the Somerset Open House meet your expectations? (circle one)

Yes No

2. What went well?

Conversation w/ Mike S.

3. What could have been better?

An actual presentation
Roads labeled clearly.

4. Please share any additional questions, thoughts, suggestions, with us.

What is maximum height of panels?

2.

1. Did the Somerset Open House meet your expectations? (circle one)

Yes No

2. What went well?

Nice presenter

3. What could have been better?

An actual presentation to group would have been beneficial, than break down as you did do

4. Please share any additional questions, thoughts, suggestions, with us.

? property values impacted ?

3.

1. Did the Somerset Open House meet your expectations? (circle one)

Yes No

2. What went well?

nice to hear about possible project

3. What could have been better?

4. Please share any additional questions, thoughts, suggestions, with us.

Will you utilize local union labor ?

4.

1. Did the Somerset Open House meet your expectations? (circle one)

Yes

No

2. What went well?

Nice people
informational

3. What could have been better?

N/A

5.

1. Did the Somerset Open House meet your expectations? (circle one)

Yes?

No

2. What went well?

Your reps were informative
and polite

3. What could have been better?

Explanation of the actual
elimination site map - Road names, etc

4. Please share any additional questions, thoughts, suggestions, with us.

Some of the information is pretty
vague/generic. I trust more detail
is easily available on the project
website

6.

7.

1. Did the Somerset Open House meet your expectations? (circle one)

Yes No

2. What went well?
Explanation of the project

3. What could have been better?
Presentation content

8.

1. Did the Somerset Open House meet your expectations? (circle one)

Yes No

As expected

2. What went well?
Questions were answered

3. What could have been better?

4. Please share any additional questions, thoughts, suggestions, with us.
Home rule should prevail Gov Cuomo should not initiate any project in any town that does not want it.
Public referendum is the only way to determine acceptance.

9.

1. Did the Somerset Open House meet your expectations? (circle one)

Yes No

2. What went well?
Conversations with personnel

3. What could have been better?
a presentation to a whole group @
questions & answers that all attending
can hear

10.

1. Did the Somerset Open House meet your expectations? (circle one)

Yes No

2. What went well?
NONE

3. What could have been better?
AES COULD HAVE BEEN MORE EXCEPTING
OF SUGGESTIONS.

4. Please share any additional questions, thoughts, suggestions, with us.
I AM NOT IN FAVOR OF THIS PROJECT.

11.

Post-Event Follow-up:

Following the open house, all attendees who provided us with contact information were given a follow-up call, email or mailed postcard (attendees listed in the document ‘6.16.21 Somerset Open House Attendee List...’).

Thank-you message (email/phone call)

Dear Ms./Mr. _____,

Thank you for attending AES’ Somerset Solar Open House on June 16, 2021. We appreciate that you took the time to meet us and learn more about the Somerset Solar Project. If you have any further questions or would like to speak with one of our team members, you can reach us via:

- The project website: www.aes.com/somerset-solar-project
- Phone: 866-767-7697,
- Email: somersetsolar@aes.com.

We look forward to hearing from you!

Neely

Thank-you message (written postcard – the goal is to re-use our extra invite postcards, covering the printed text with white stickers or paper, and adding the new written message on top – see below for final product)

Dear Ms./Mr. _____,

On behalf of the Somerset Solar team, thank you for attending AES' Somerset Open House on June 16, 2021. We appreciate that you took the time to meet us and learn about the project. If you have any further questions, please reach out to us using the contact info below. We look forward to hearing from you!

Best,

Stephanie Hince, Community Relations, AES

NOTICE OF VIRTUAL COMMUNITY MEETING

SOMERSET SOLAR PROJECT

Please join AES for a virtual community meeting regarding the Somerset Solar project, an approximately 148.5-megawatt (MW) solar energy project proposed to be located in the Town of Somerset in Niagara County, New York, at the site of the closed Somerset coal power station.

AES looks forward to meeting with the community to discuss updates to the project and the 94-c permitting process, and to answer questions about this exciting development.

Date: Wednesday, December 15th

Time: 6:00pm – 7:00pm EST

A link to register for this virtual community meeting is available on the project website at:

<https://www.aes.com/somerset-solar-project>

After registering, you will receive a confirmation email containing information about joining the webinar. AES is using the Zoom platform to conduct this virtual community meeting. More information on how to use this platform is available at support.zoom.us

For further information, please visit the project website at <https://www.aes.com/somerset-solar-project>

Reg. No. 5331785
Qualified in Orleans County
Commission Expires September 30, 2022

An aerial, low-angle photograph of a vast solar farm. The rows of solar panels stretch far into the distance, creating a strong sense of perspective. The sun is setting on the horizon, casting a warm, golden glow across the sky and reflecting off the panels. The sky transitions from a deep orange near the horizon to a dark blue at the top. The overall mood is one of clean energy and forward progress.

Accelerating the future
of energy, **together.**

Car key of future is still in your pocket

By **STEPHEN WILLIAMS**
NEW YORK TIMES

NEW YORK — Call them what you want: digital keys the shape of a credit card, keyless start pods, keyless push-button start devices, intelligent keys, or smart or “smartphone” keys. They’re the way we open and start cars now — and more — and it’s unlikely the primitive keys of the past are coming back.

At an upstate New York gathering of the International Motor Press Association before the pandemic, members spent a day tooling about roads near Bear Mountain in lots of new cars. I took turns in an Alfa Romeo, two BMWs, a Volvo, two Volkswagens, a Lexus, and an Acura, among others. Not once did I touch an ignition key.

Certainly, the shift from cranks and solenoids and bits of small metal to remote, wireless contraptions isn’t only about science and technology. There are elements of convenience, design, ecology and fashion. But mostly it’s about science and technology.

Sometimes, however, one might wish for a real key; the alternatives are not bulletproof. Tesla drivers recently punched up the smartphone app they use to unlock and start their cars. The app was not responding, as a server had gone down. The Tesla key “card” would work — Tesla’s version of a fob — but drivers who depended on their phones were stuck. The problem was sorted out fairly quickly, and Tesla CEO Elon Musk tweeted apologies.

“It was Chrysler in 1949 that introduced the key that operated the combined ignition and starter switch,” said Brandt Rosenbusch, manager of historical services for the former Fiat Chrysler Automobiles (now called Stellantis). “Prior to this,” he added, “cars were started by turning a key to power the ignition, and drivers then pushed a starter button either on the floor or instrument panel.” Before the 1960s, most vehicles required a separate coded key to switch on the ignition and one to open the doors or trunk.

Many years ago, after I was newly licensed, I’d regularly ask Dad, “Can I have the keys?” That meant just one thing: Can I take the car? Usually he’d toss them over — one key for the ignition, one for the doors of the Oldsmobile. “Be careful,” he’d say.

Do teenagers today ask, “Dad, can I have the fob?”

It took decades for the fob — believed to be related to the German word “fuppe,” meaning “pocket” — to acquire remote capabilities and send coded radio signals to

A woman opens a Tesla trunk with an iPhone app. Today’s car keys are in fobs or on phones, and they can do far more than just open doors and start the engine.

a receiver in the vehicle. Often the first “fob function” was allowing drivers to lock and unlock the doors. Advancements in technology granted it the ability to open the trunk, activate an alarm system and eventually develop “smarts”: simply carry it into the cockpit and push the “start” button on or near the dash. The new technologies also help to foil the best efforts of the gone-in-60-seconds bandits.

Several vehicle-operating functions have already been outsourced to smartphones. For example, an app for some BMWs can remotely start the auto; it will run for 15 minutes, heating or cooling the cabin, before automatically shutting off. But some type of hardware — a wireless fob, round or square, with tiny buttons to open and close doors, hatches, windows and sunroofs, and perhaps a “panic” function to set off the car’s alarm system — will most likely remain until mobile devices “eliminate the need for a physical piece of hardware altogether,” said Todd Parker, director of global design for General Motors.

The march of key fob progress is assuredly unstoppable, and the ultimate recipient — the car buyer — is in its crosshairs. At the Volvo of Queens dealership in New York, Peter Fearon, a salesperson, said the migration from metal key to electronic controller was a fait accompli. “Everything in the car is computer-controlled,” he said.

“Everybody’s happy.”

Not everybody, said John Albanese, who works at Bayside Volkswagen next door to Volvo.

“Usually, older people, they don’t like the push button to start the car,” he said. “They’re afraid they’ll forget to shut off the car. They think it’ll somehow fail. A young person just wants to talk to the car. ‘Start the car; drive me home.’ It’s a totally different mindset.”

Albanese, who has been selling automobiles of assorted brands for 43 years, also suggests that modern fob devices complicate the delivery process.

“We explain the functions, but half the time, what we tell customers goes in one ear and out the other,” he said. “And the owner’s manual ... well, that’s never touched, never opened.”

There’s also the question of replacing a lost modern fob. Figure more than \$200, Albanese warns, “and then each key has to be programmed, because each car is different.” (I recall surreptitiously copying the ignition key for Dad’s Oldsmobile: \$1.75.)

Parker believes that the modern key “is enabling us to completely redefine the vehicle ownership experience.”

“Car keys — no matter what form they take — will create a seamless bridge between an individual driver’s unique preferences and the vehicle itself,” he said.

Please join AES for a virtual community meeting regarding the Somerset Solar project, an approximately 148.5-megawatt (MW) solar energy project proposed to be located in the Town of Somerset in Niagara County, New York, at the site of the closed Somerset coal power station.

AES looks forward to meeting with the community to discuss updates to the project and the 94-c permitting process, and to answer questions about this exciting development.

Greetings Office Staff,

I hope you are all well. I am writing to remind the Office that AES is holding a virtual community meeting tonight for the proposed Somerset Solar Project. We know folks are very busy, but we hope that Office Staff can join us tonight. The details for participating in the virtual session are in the attached notice. Feel free to let me know if you have any questions.

Thank you,

NOTICE OF VIRTUAL COMMUNITY MEETING

SOMERSET SOLAR PROJECT

Please join AES for a virtual community meeting regarding the Somerset Solar project, an approximately 148.5-megawatt (MW) solar energy project proposed to be located in the Town of Somerset in Niagara County, New York, at the site of the closed Somerset coal power station.

AES looks forward to meeting with the community to discuss updates to the project and the 94-c permitting process, and to answer questions about this exciting development.

Date: Wednesday, December 15th

Time: 6:00pm – 7:00pm EST

A link to register for this virtual community meeting is available on the project website at:

<https://www.aes.com/somerset-solar-project>

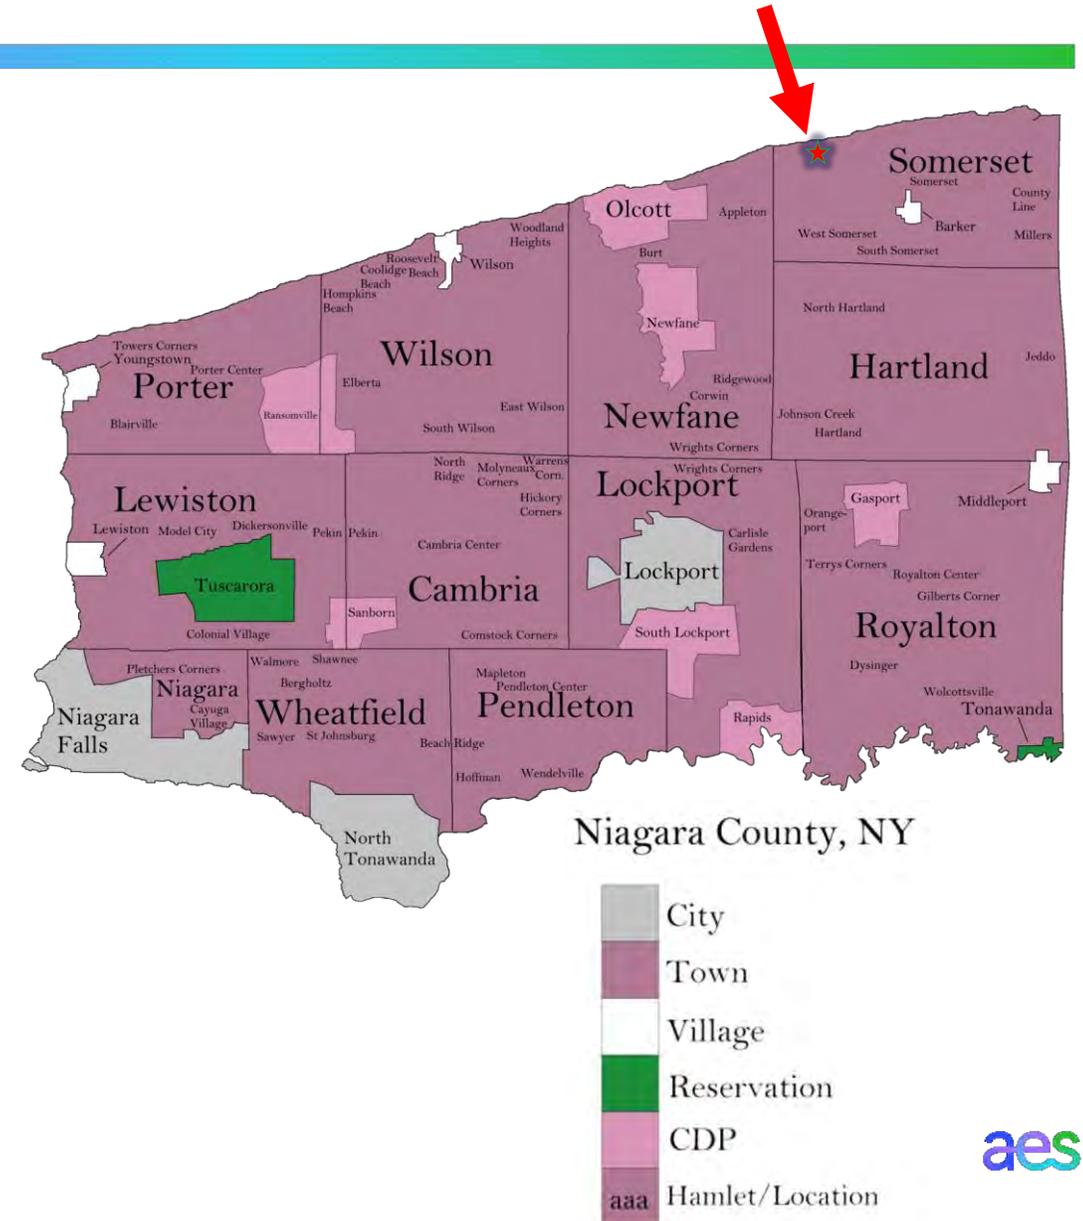

After registering, you will receive a confirmation email containing information about joining the webinar. **AES** is using the Zoom platform to conduct this virtual community meeting. More information on how to use this platform is available at support.zoom.us

For further information, please visit the project website at <https://www.aes.com/somerset-solar-project>

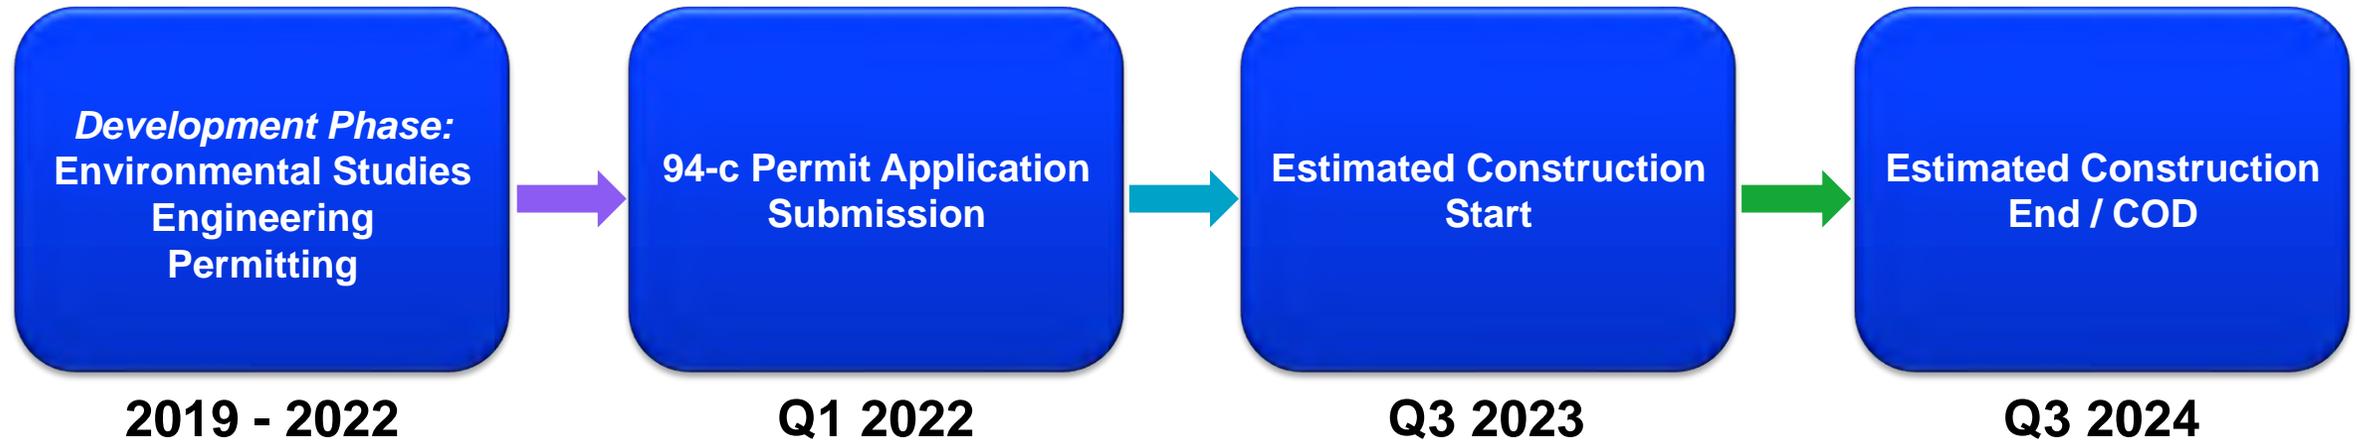

Somerset Solar Project Overview

Somerset Solar Project Overview

- **Nameplate Capacity:** 135 MWac
- **Location:** Town of Somerset, Niagara County, NY (site of former Somerset coal power station)
- **Point of Interconnection:** Substation on-site
- **Project Footprint:** ~1,000 acres
- **Env Benefits:** Enough electricity to power 30,800 homes and offset carbon emissions equivalent to 169,400 metric tons annually
- **Expected Commercial Operation Date (COD):** Q3 2024

Expected Project Timeline

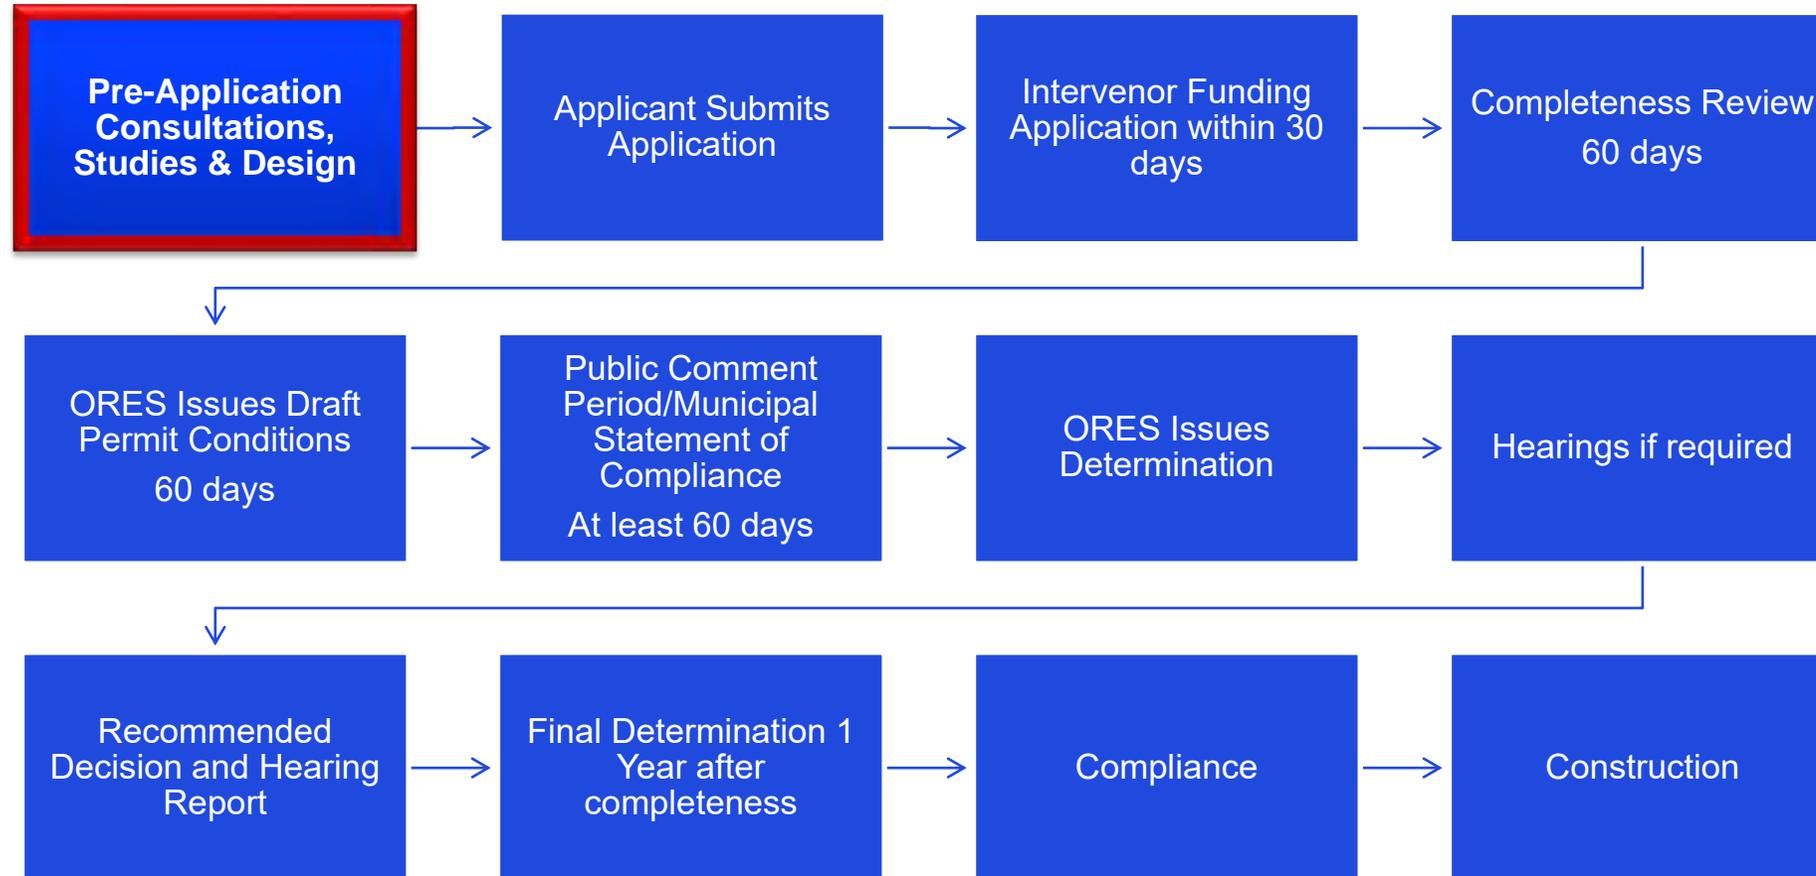

Somerset Solar Preliminary Project Layout

Overview of Section 94-c Process

- In 2020, New York State introduced a new permitting process for large scale renewable energy projects, the “Section 94-c” process.
- Review and decision will be made by the Office of Renewable Energy Siting (ORES) within the Department of State – draft Regulations and Uniform Standards and Conditions (USC) were issued by ORES on September 16, 2020, with a public comment period through December 6, and the final regulations were issued on March 3, 2021.
- Provides for election to transition into process for existing Article 10 Projects.
- **Requires pre-application consultations with state agencies, host municipalities, and meetings with community members.**
- USCs outline design requirements for large scale projects to standardize design expectations regarding setbacks and potentially sensitive resources. Site specific requirements will also augment the USCs.
- Projects must be designed to avoid or minimize, to the maximum extent practicable, potentially significant adverse environmental impacts.

Section 94-c Schedule Overview

Local Law Review

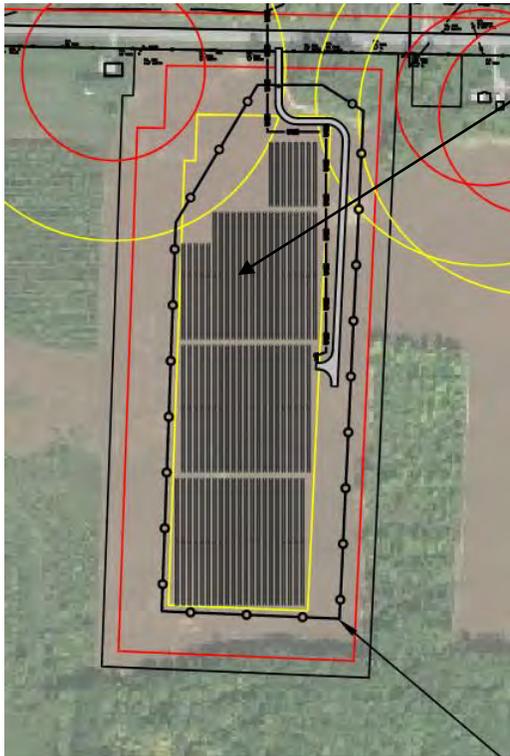

→ Review of local town law and subsequent analysis identified several provisions that the project cannot comply with, for example:

- Town Setbacks
- Lot Acreage
- Prime Farmland exclusion

→ Official letter to follow this meeting outlining all town law provisions

Setback Waiver Request

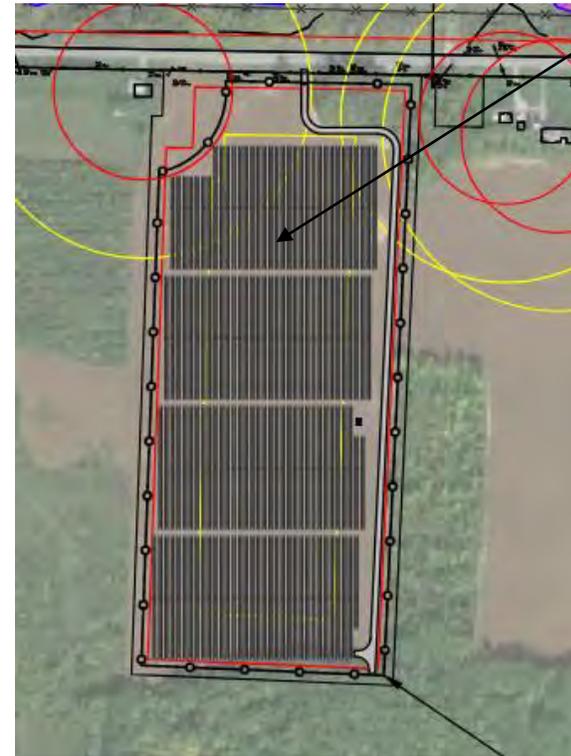

Town Setback

- **3.749 MWdc**
- Town law setback unreasonably limits the amount of capacity generated from ideal parcel areas

Town Setback ———

94c Setback

- **7.497 MWdc**
- Nearly double dc generation capacity
- Utilizing 94c setbacks allows more generation from ideal parcel areas
- Allows project to reach target nameplate capacity and financial viability while avoiding other sensitive areas

94c Setback ———

Overview of 94-c and Municipalities

- ORES must make finding that the project complies with applicable substantive local laws and regulations.
- Similar to Article 10, ORES can elect not to apply a local law that is unreasonably burdensome in view of CLCPA targets and environmental benefits of the project.
- Requires municipalities to submit a statement of compliance with local laws at least 60 days after issuance of the draft permit.
- Local community intervenors and host towns are able to seek intervenor funds (\$1,000/MW).
- 75% of funds reserved for municipalities.
- Must apply for funds within 30 days of application filing.
- Requires host community benefit.

Welcome!

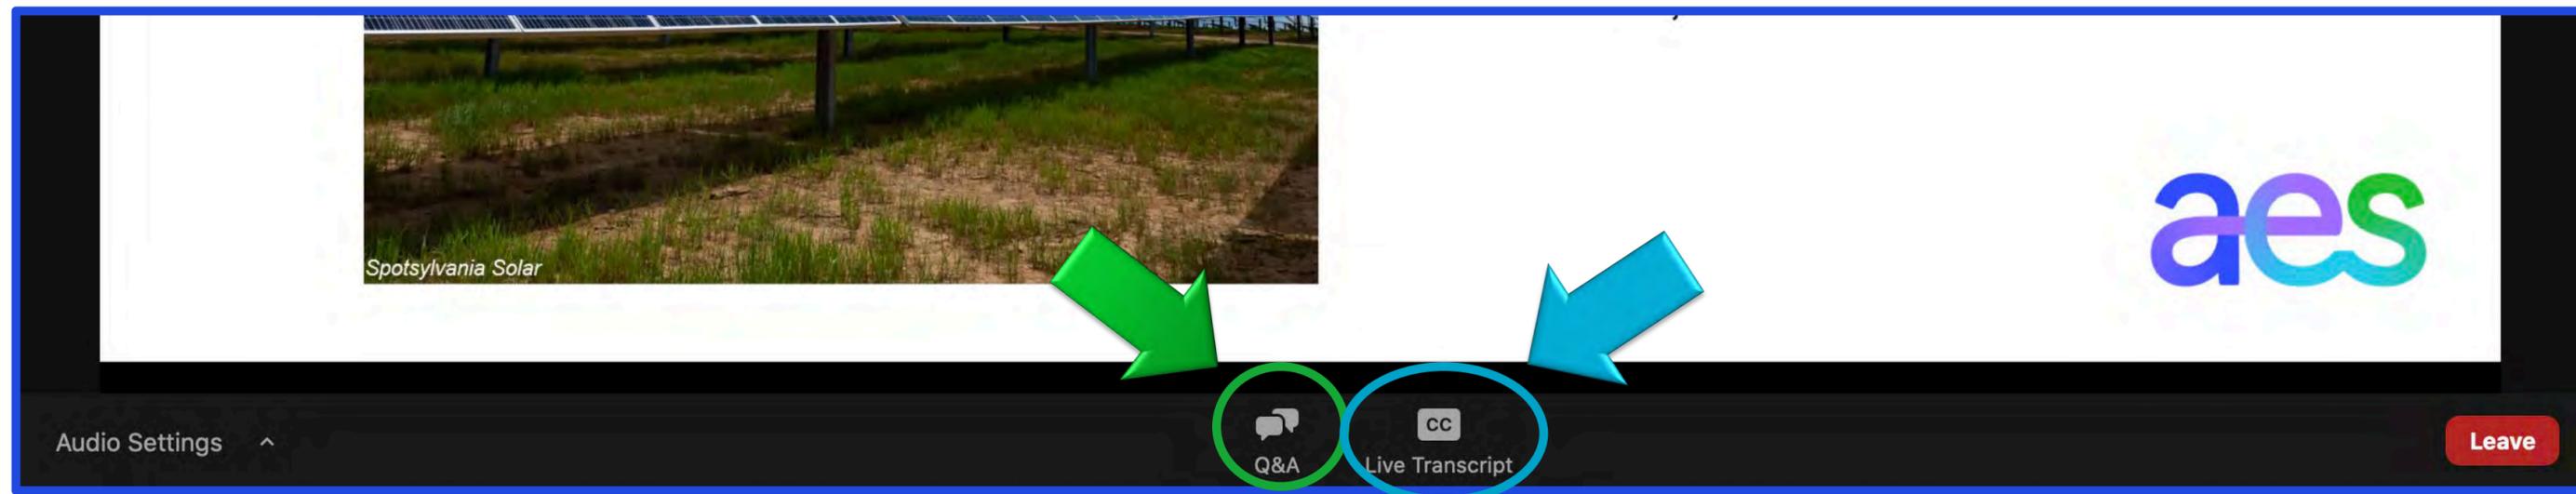

Somerset Solar Virtual Community Meeting

December 15, 2021

Housekeeping

- Meeting Duration: 1 hour
- Please submit questions in the **Zoom Q&A**
- Can't access the Q&A feature? Submit questions via email to somerset solar@aes.com
- Use the 'Live Transcript' feature to view closed captions
- A recording of this meeting will be made available on the project website (www.aes.com/somerset-solar-project), along with the presentation slides and a transcript of the Q & A

Purpose

The purpose of today's virtual community meeting:

- Present project information and updates
- Provide information on the New York State 94-c permitting process
- Inform the community about next steps in project development and how you can get involved
- Fulfill the public engagement component of 94-c

Out of an abundance of caution regarding the ongoing Covid pandemic, AES decided to hold this community meeting virtually for the safety of our team and the local community. Although we are not together in person, the Somerset Solar team is committed to being accessible to the Somerset community. We look forward to engaging with you in-person when it is safe to do so.

286.2 MW

97.6 MW

AES CE Development Portfolio: 17 GW+

AES CE in NY:

Operating Portfolio: 807.6 MW

Development Portfolio: 2 GW+

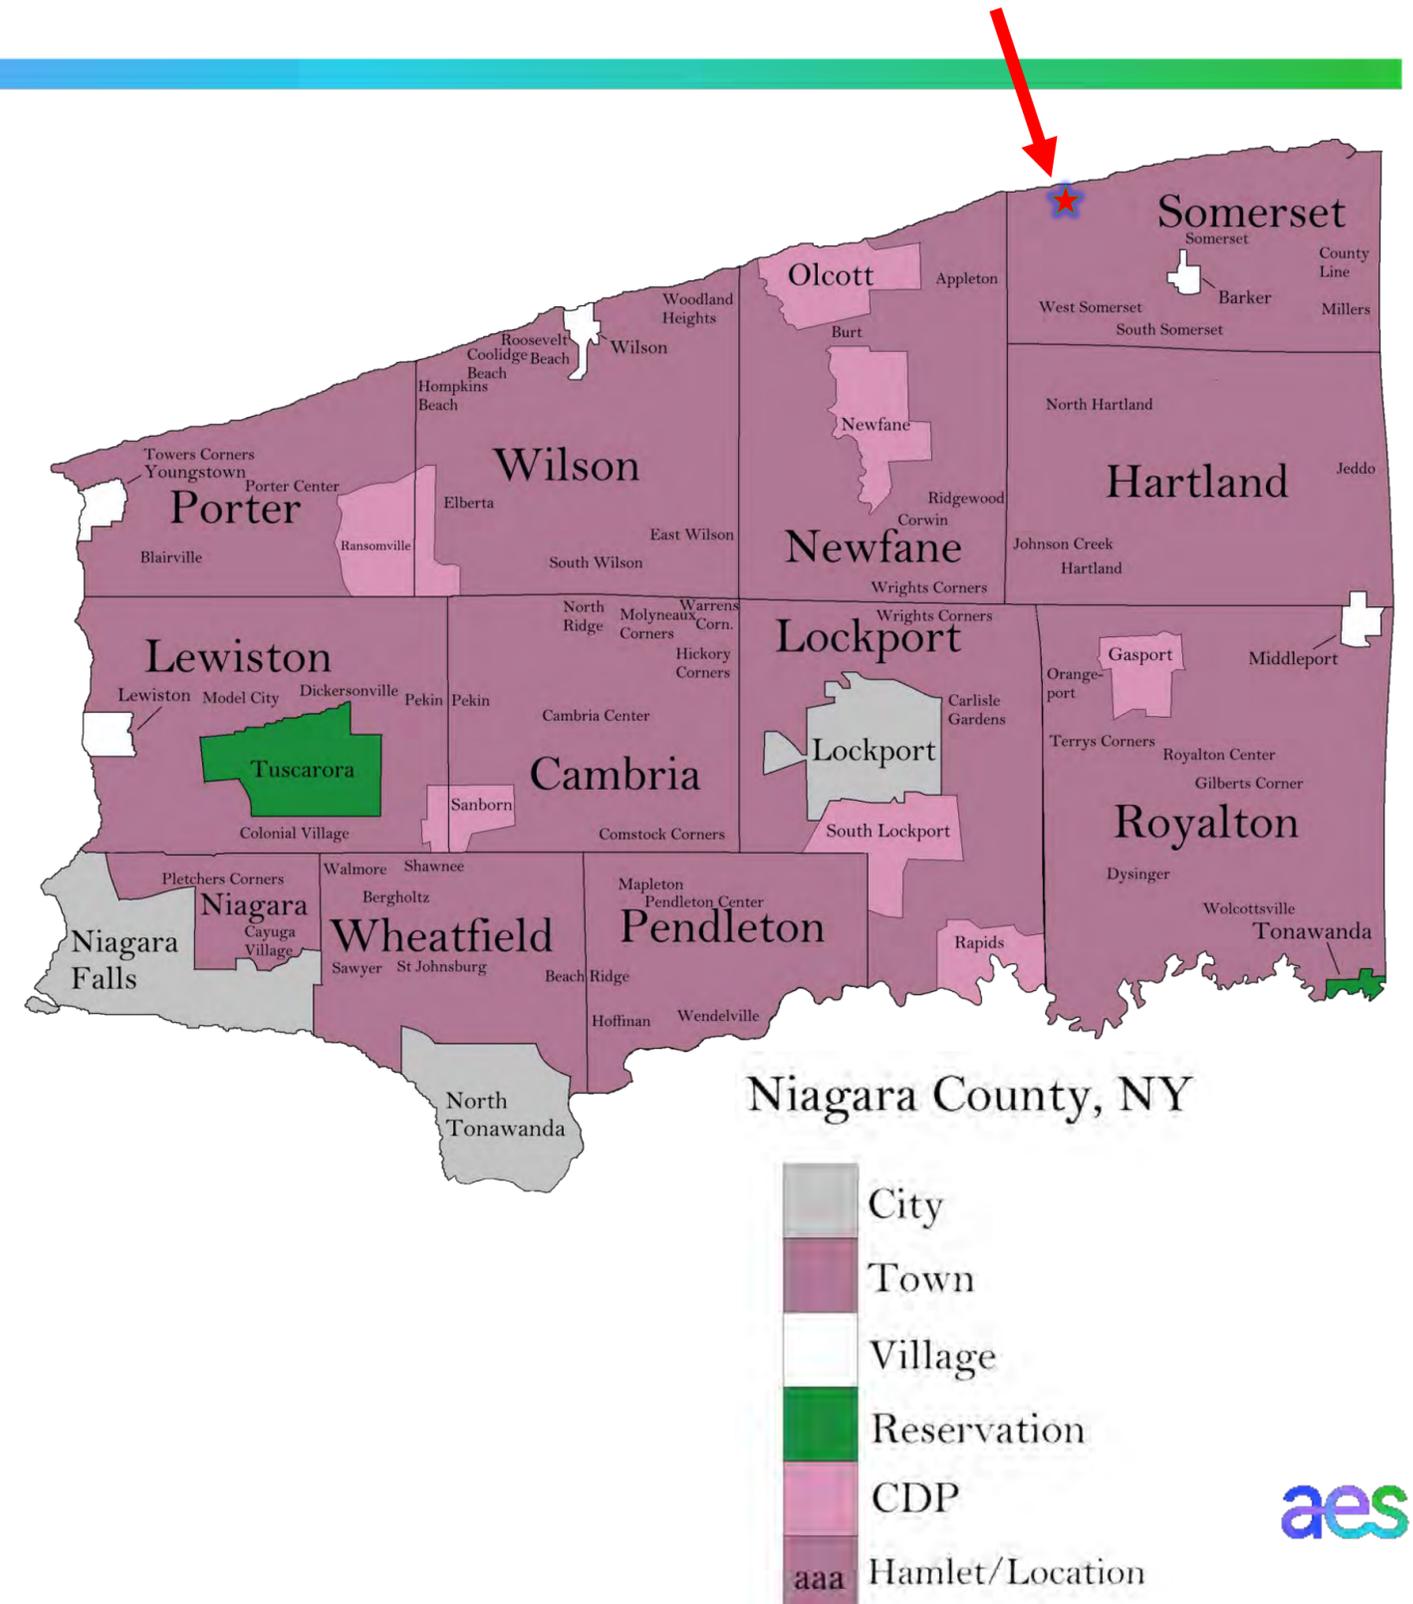

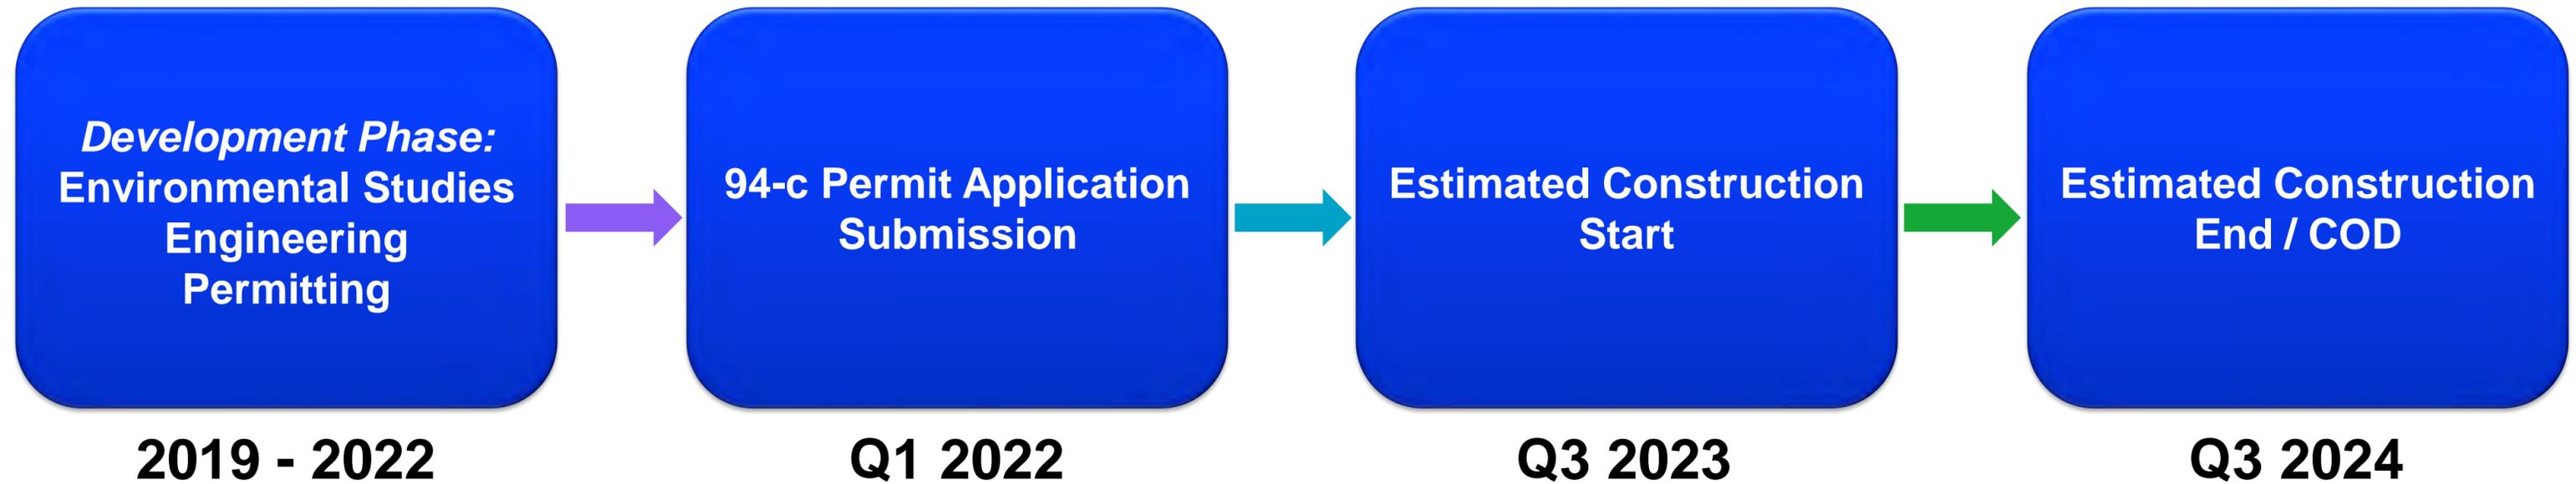

Somerset Solar Project Overview

Somerset Solar Project Overview

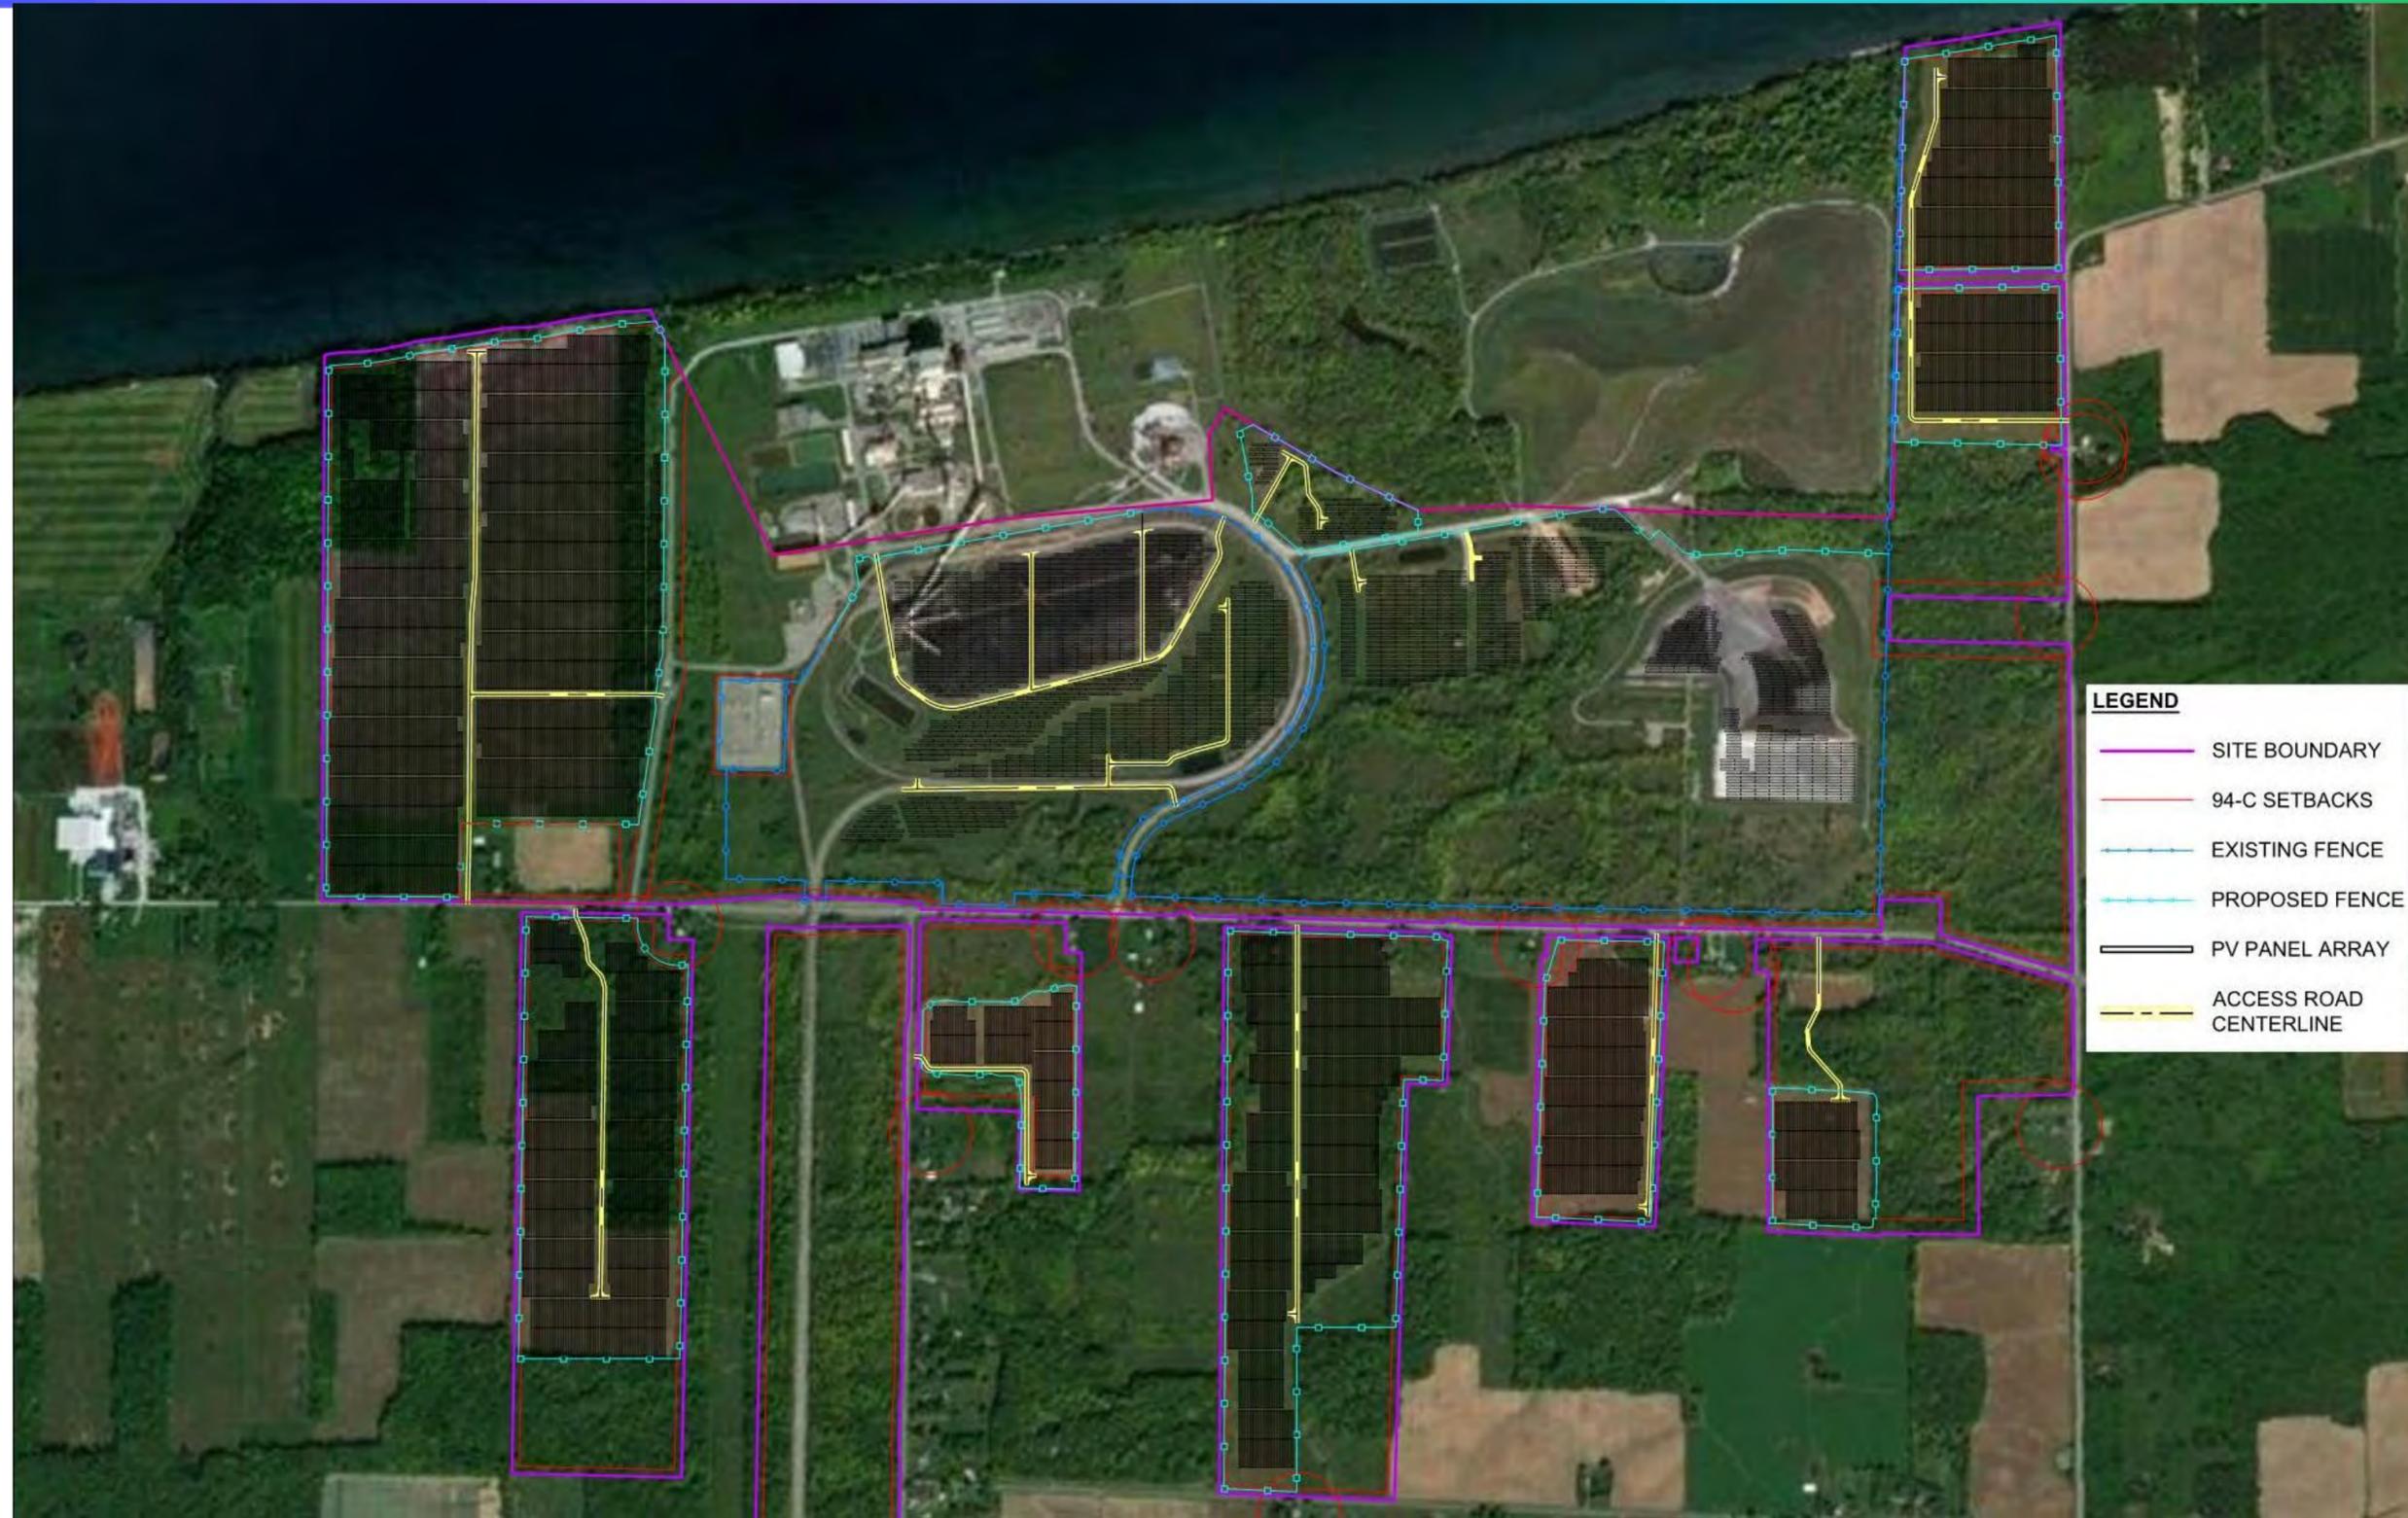

- **Nameplate Capacity:** 135 MWac
- **Location:** Town of Somerset, Niagara County, NY (site of former Somerset coal power station)
- **Point of Interconnection:** Substation on-site
- **Project Footprint:** ~1,000 acres
- **Env Benefits:** Enough electricity to power 30,800 homes and offset carbon emissions equivalent to 169,400 metric tons annually
- **Expected Commercial Operation Date (COD):** Q3 2024

Expected Project Timeline

Somerset Solar Preliminary Project Layout

Economic Benefits

- \$200+ million in capital investment
- \$10+ million in estimated tax revenue over 20 years of operation to Niagara County, the Town of Somerset, and the Barker Central School District, via Host Community Agreement (HCA) and other negotiated mechanisms
 - Project does not require additional services, so no pressure on local services/resources
- 150+ jobs during construction
- 2-3 full-time equivalent jobs
- Increased local spending
- \$500/MW per year electric utility bill credit, distributed among all residential utility customers within Somerset for ten years

AES as a Neighbor & Partner

- AES is committed to being a good neighbor by:
 - Developing, owning and operating Somerset Solar over the life of the project
 - Engaging local schools and the community through sponsorships, partnerships, presentations and site tours
 - Public Involvement Program (PIP) Plan
- We strive to support local initiatives, especially related to economic development, the environment, energy efficiency and STEM education.

Community Engagement

- In-person open house in June 2021
- Local agencies meeting December 15, 2021
- Meetings with:
 - Landowners
 - Somerset Town Board Members
 - Niagara County officials
 - Community stakeholders (e.g., SOS)
- Commitment to issues of local concern:
 - Babcock House
 - Rails to Trails
 - Somerset Park
 - Avian accommodations

Community Engagement: Hearing from you!

- We welcome suggestions on how to further engage with you
- You can contact us via our:
 -  **Toll-free number: [866-757-7697](tel:866-757-7697)**
 -  **Project Email: somerset solar@aes.com**
 -  **Project Website: www.aes.com/somerset-solar-project**
- **Virtual Office Hours** via our toll-free number
 - Mondays: 11am - 1pm
 - Thursdays: 4pm - 6pm
- If you call outside of these hours, we will return your call ASAP

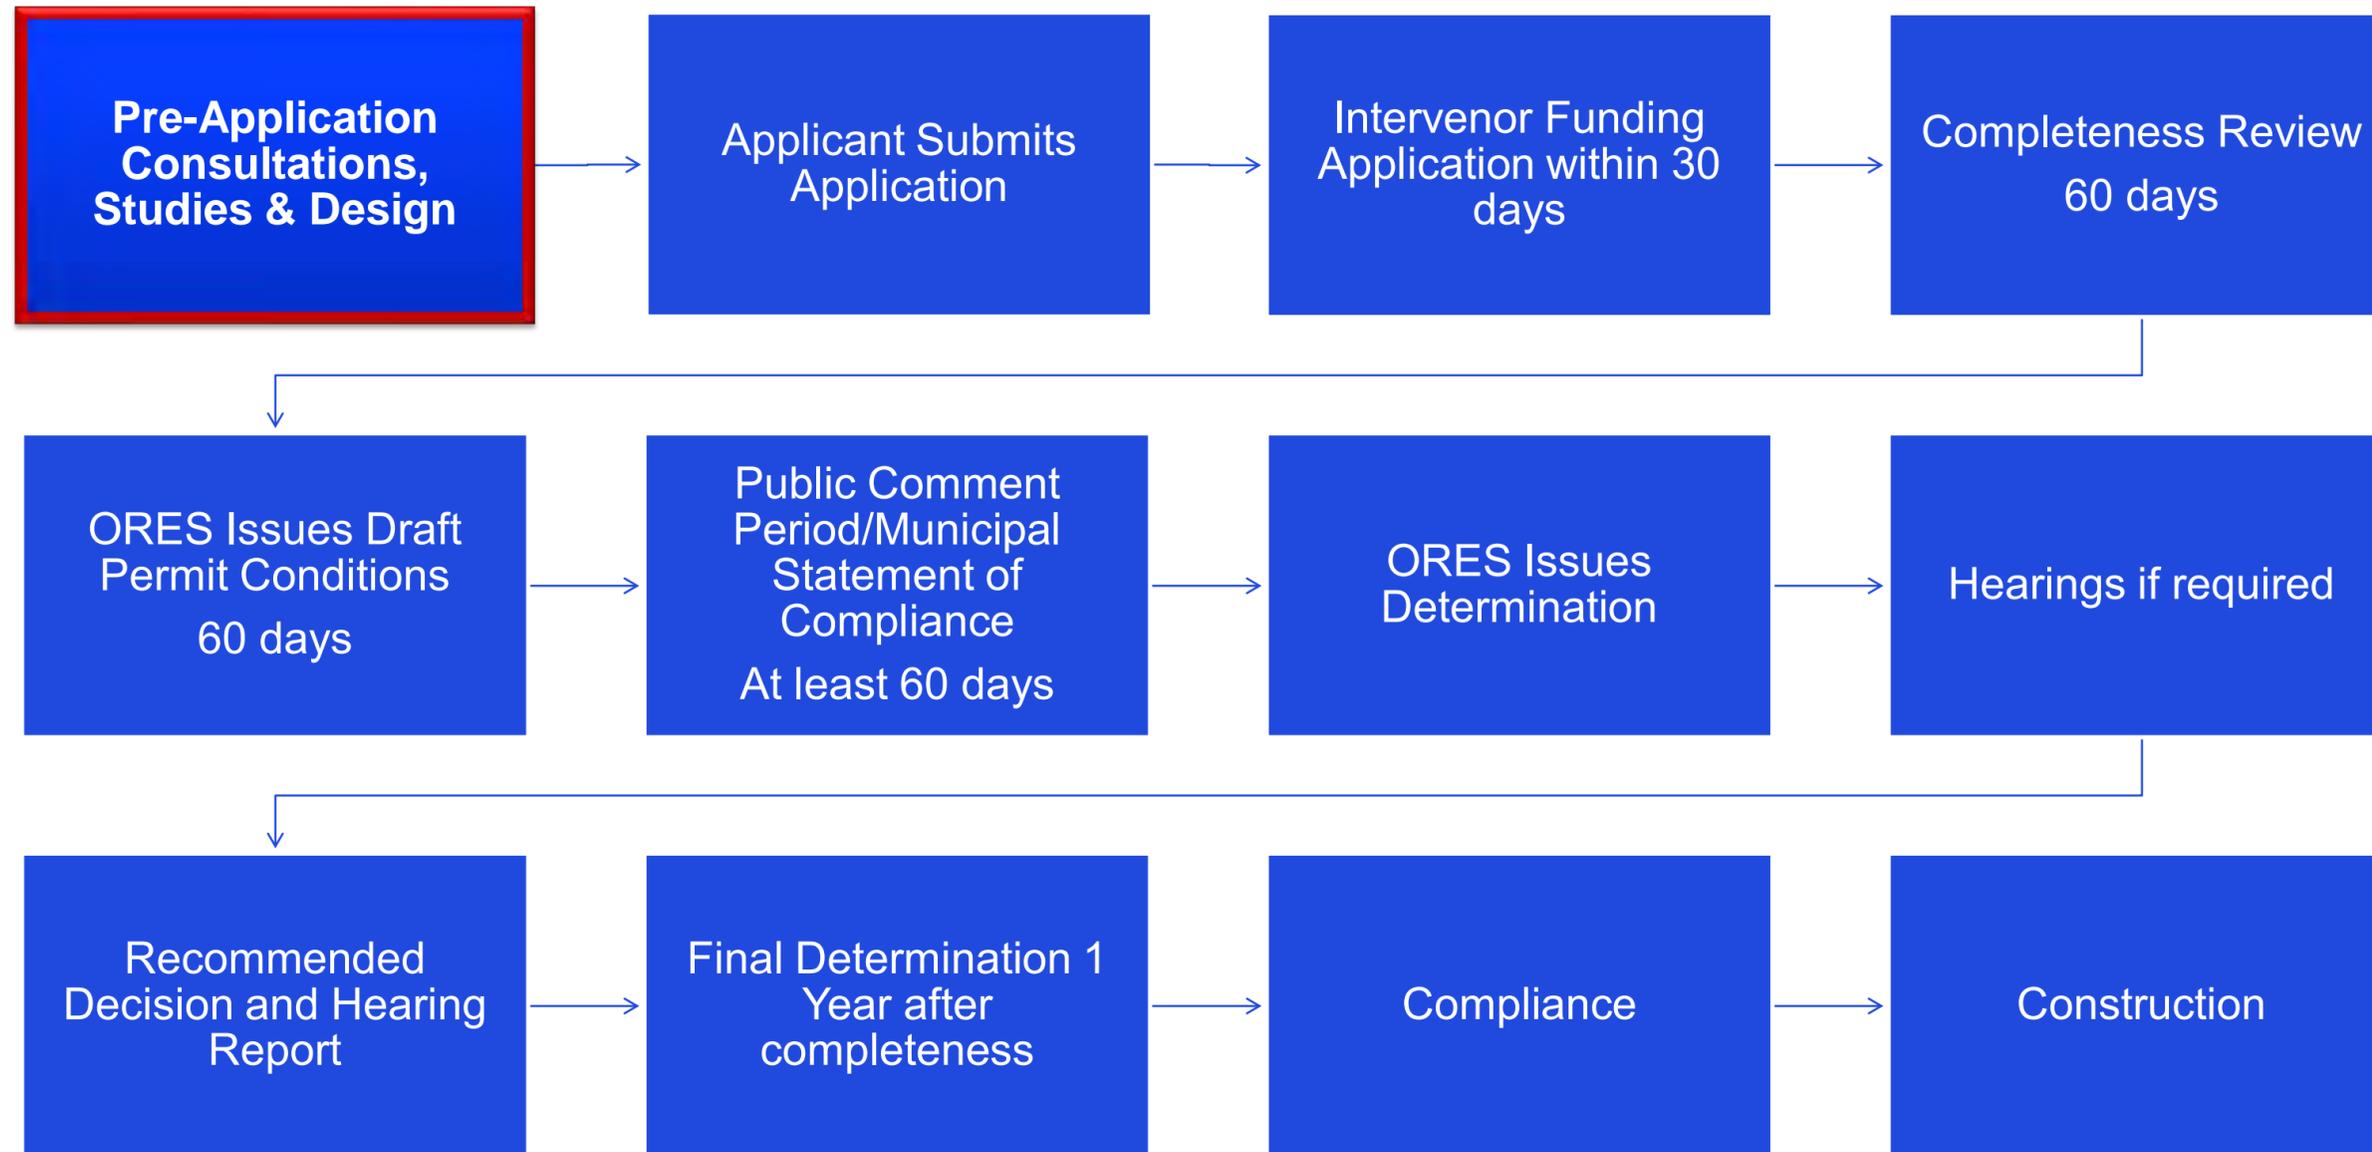

NYS Regulatory Overview

Overview of Section 94-c Process

- In 2020, New York State introduced a new permitting process for large scale renewable energy projects, the “Section 94-c” process.
- Review and decision will be made by the Office of Renewable Energy Siting (ORES) within the Department of State – draft Regulations and Uniform Standards and Conditions (USC) were issued by ORES on September 16, 2020, with a public comment period through December 6, and the final regulations were issued on March 3, 2021.
- Provides for election to transition into process for existing Article 10 Projects.
- **Requires pre-application consultations with state agencies, host municipalities, and meetings with community members.**
- USCs outline design requirements for large scale projects to standardize design expectations regarding setbacks and potentially sensitive resources. Site specific requirements will also augment the USCs.
- Projects must be designed to avoid or minimize, to the maximum extent practicable, potentially significant adverse environmental impacts.

Section 94-c Schedule Overview

Overview of 94-c and Municipalities

- ORES must make finding that the project complies with applicable substantive local laws and regulations.
- Similar to Article 10, ORES can elect not to apply a local law that is unreasonably burdensome in view of the Climate Leadership and Community Protection Act (CLCPA) targets and environmental benefits of the project.
- Requires municipalities to submit a statement of compliance with local laws at least 60 days after issuance of the draft permit.
- Local community intervenors and host towns are able to seek intervenor funds (\$1,000/MW).
- 75% of funds reserved for municipalities.
- Must apply for funds within 30 days of application filing.
- Requires host community benefit.

94-c Siting Application Exhibits

1. General Requirements
2. Overview and Public Involvement
3. Location of Facilities and Surrounding Land Use
4. Real Property
5. Design Drawings
6. Public Health, Safety and Security
7. Noise and Vibration
8. Visual Impacts
9. Cultural Resources
10. Geology, Seismology and Soils
11. Terrestrial Ecology
12. NYS Threatened or Endangered Species
13. Water Resources and Aquatic Ecology
14. Wetlands
15. Agricultural Resources
16. Effect on Transportation
17. Consistency with Energy Planning Objectives
18. Socioeconomic Effects
19. Environmental Justice
20. Effect on Communications
21. Electric System Effects and Interconnection
22. Electric and Magnetic Fields
23. Site Restoration and Decommissioning
24. Local Laws and Ordinances
25. Other Permits and Approvals

Site Restoration and Decommissioning

- **§ 900-2.24 Exhibit 23: Site Restoration and Decommissioning**
 - A Decommissioning and Site Restoration Plan detailing: Safety and the removal of hazardous conditions; Environmental Impacts; Aesthetics; Recycling; Potential future uses for the site; Funding; and Schedule.
 - A gross and net decommissioning and site restoration estimate.
- **§ 900-10.2 Pre-Construction Compliance Filings**
 - A final Decommissioning and Site Restoration Plan and decommissioning and site restoration estimate will be provided as a Compliance Filing.

Local Law Substantive Requirements

Town of Somerset

- Town of Somerset Code
- Town Solar Law (Chapter 205, Article XXII, Solar Energy Systems)
- Proposed Town Solar Energy Systems Law (Local Law Amending Chapter 205, Article XXII)
- Town of Somerset Comprehensive plan

Intervenor Funds

What is Intervenor Funding?

Intervenor funding is money that Applicants such as Somerset Solar make available to qualified, locally affected parties and municipalities to offset certain expenses in the state permitting process. These funds were created to encourage early and effective public involvement in project development and permitting.

94-c Application Intervenor Fund:

- Upon the filing of a 94-c Application, Somerset Solar will post an intervenor fund (\$1,000/MW) which can be sought by local community intervenors and local agencies. 75% of funds are reserved for municipalities.
- Must apply for funds within 30 days of Application filing:

Applications for Intervenor Funds to:

general@ores.ny.gov

or

New York State Office of Renewable Energy Siting

Community Interest Topics & Study Updates

Wetlands and Waterbodies

Wetland and waterbody delineation performed on the Site in May 2021, compliant with USACE 1987 Delineation Manual/2012 Regional Supplement.

- Site layout attempts to avoid and minimize impacts to wetlands and water resources.
- No NYSDEC mapped wetlands in the Project Area or adjacent properties.
- Approximately 267 acres of wetlands were delineated within the Project Area.
- 18 streams and 9 water bodies (Natural and man made) were identified within the Project Area.
- Site visit performed with a New York ORES Representative (12/1/21); report submitted to ORES for review.
- If required, a Compensatory Mitigation Plan will be included in the Application.

Rare, Threatened, and Endangered Species

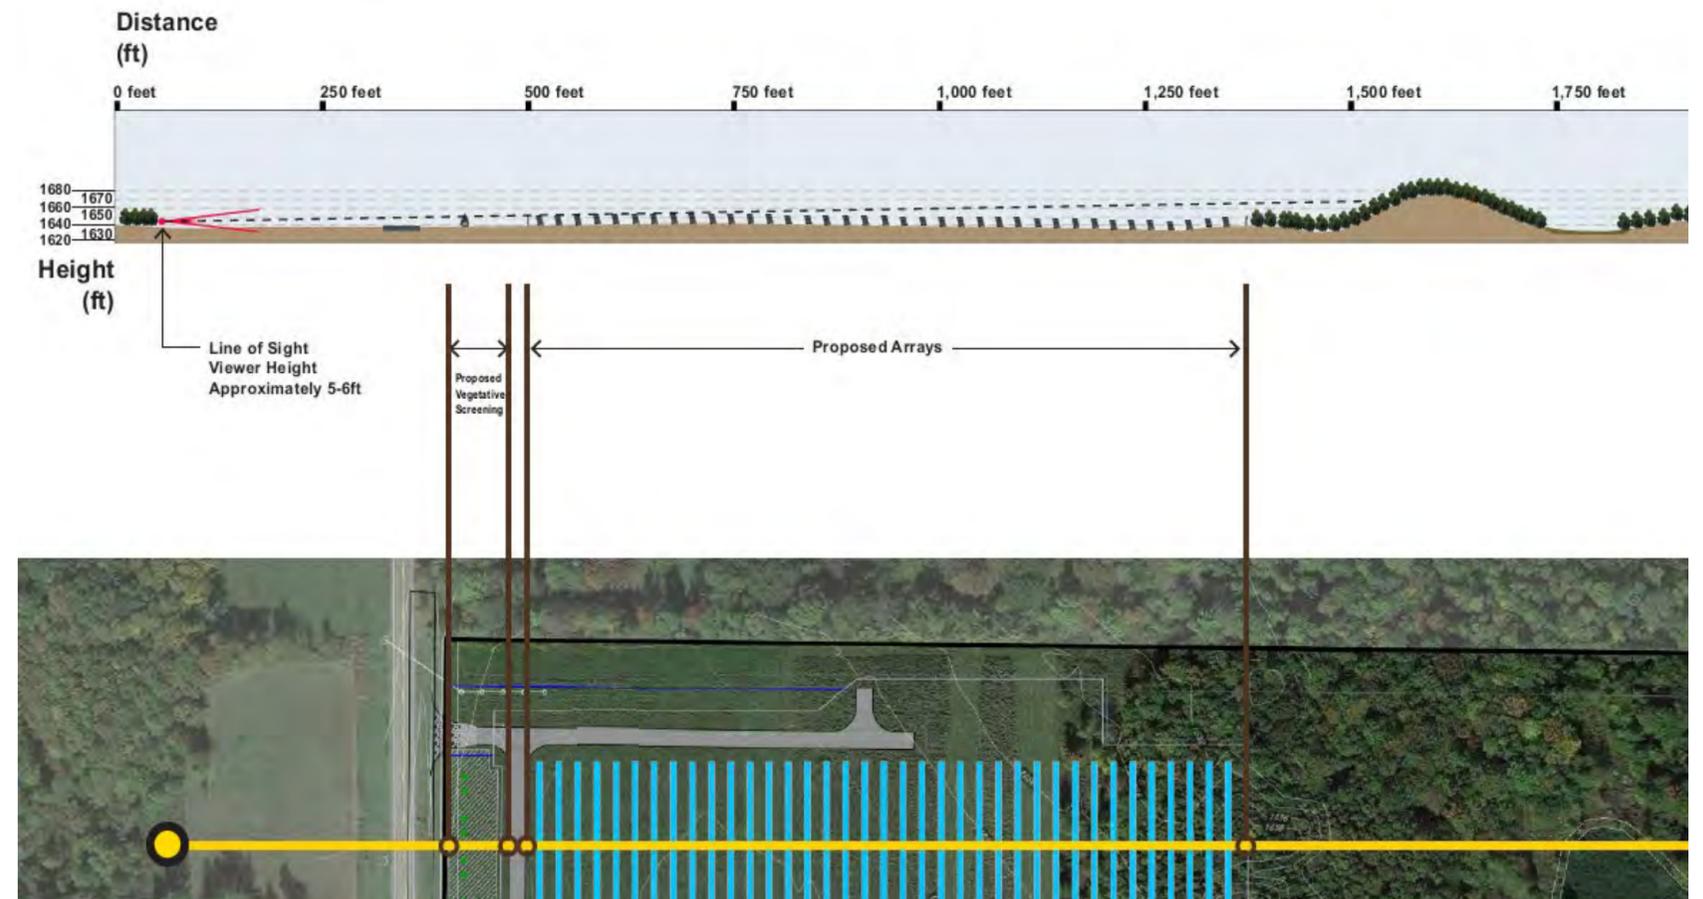

- **Breeding Bird Surveys**
 - Surveys were performed Spring/Summer 2021 in accordance with the *ORES 2021 Field Survey Protocol for State-listed Breeding Grassland Bird Species*.
- **Winter Raptor Surveys**
 - Conducted in Winter 2020-2021 in accordance with the NYSDEC Protocols
 - No State-listed Endangered or Threatened Species were identified performing an essential behavior during the survey.
- **Bald Eagle:** Avoidance of known nest north of Project Area
- **Other Species:** Potential bat habitat in the vicinity of the Project Area

Visual Resources & Landscaping

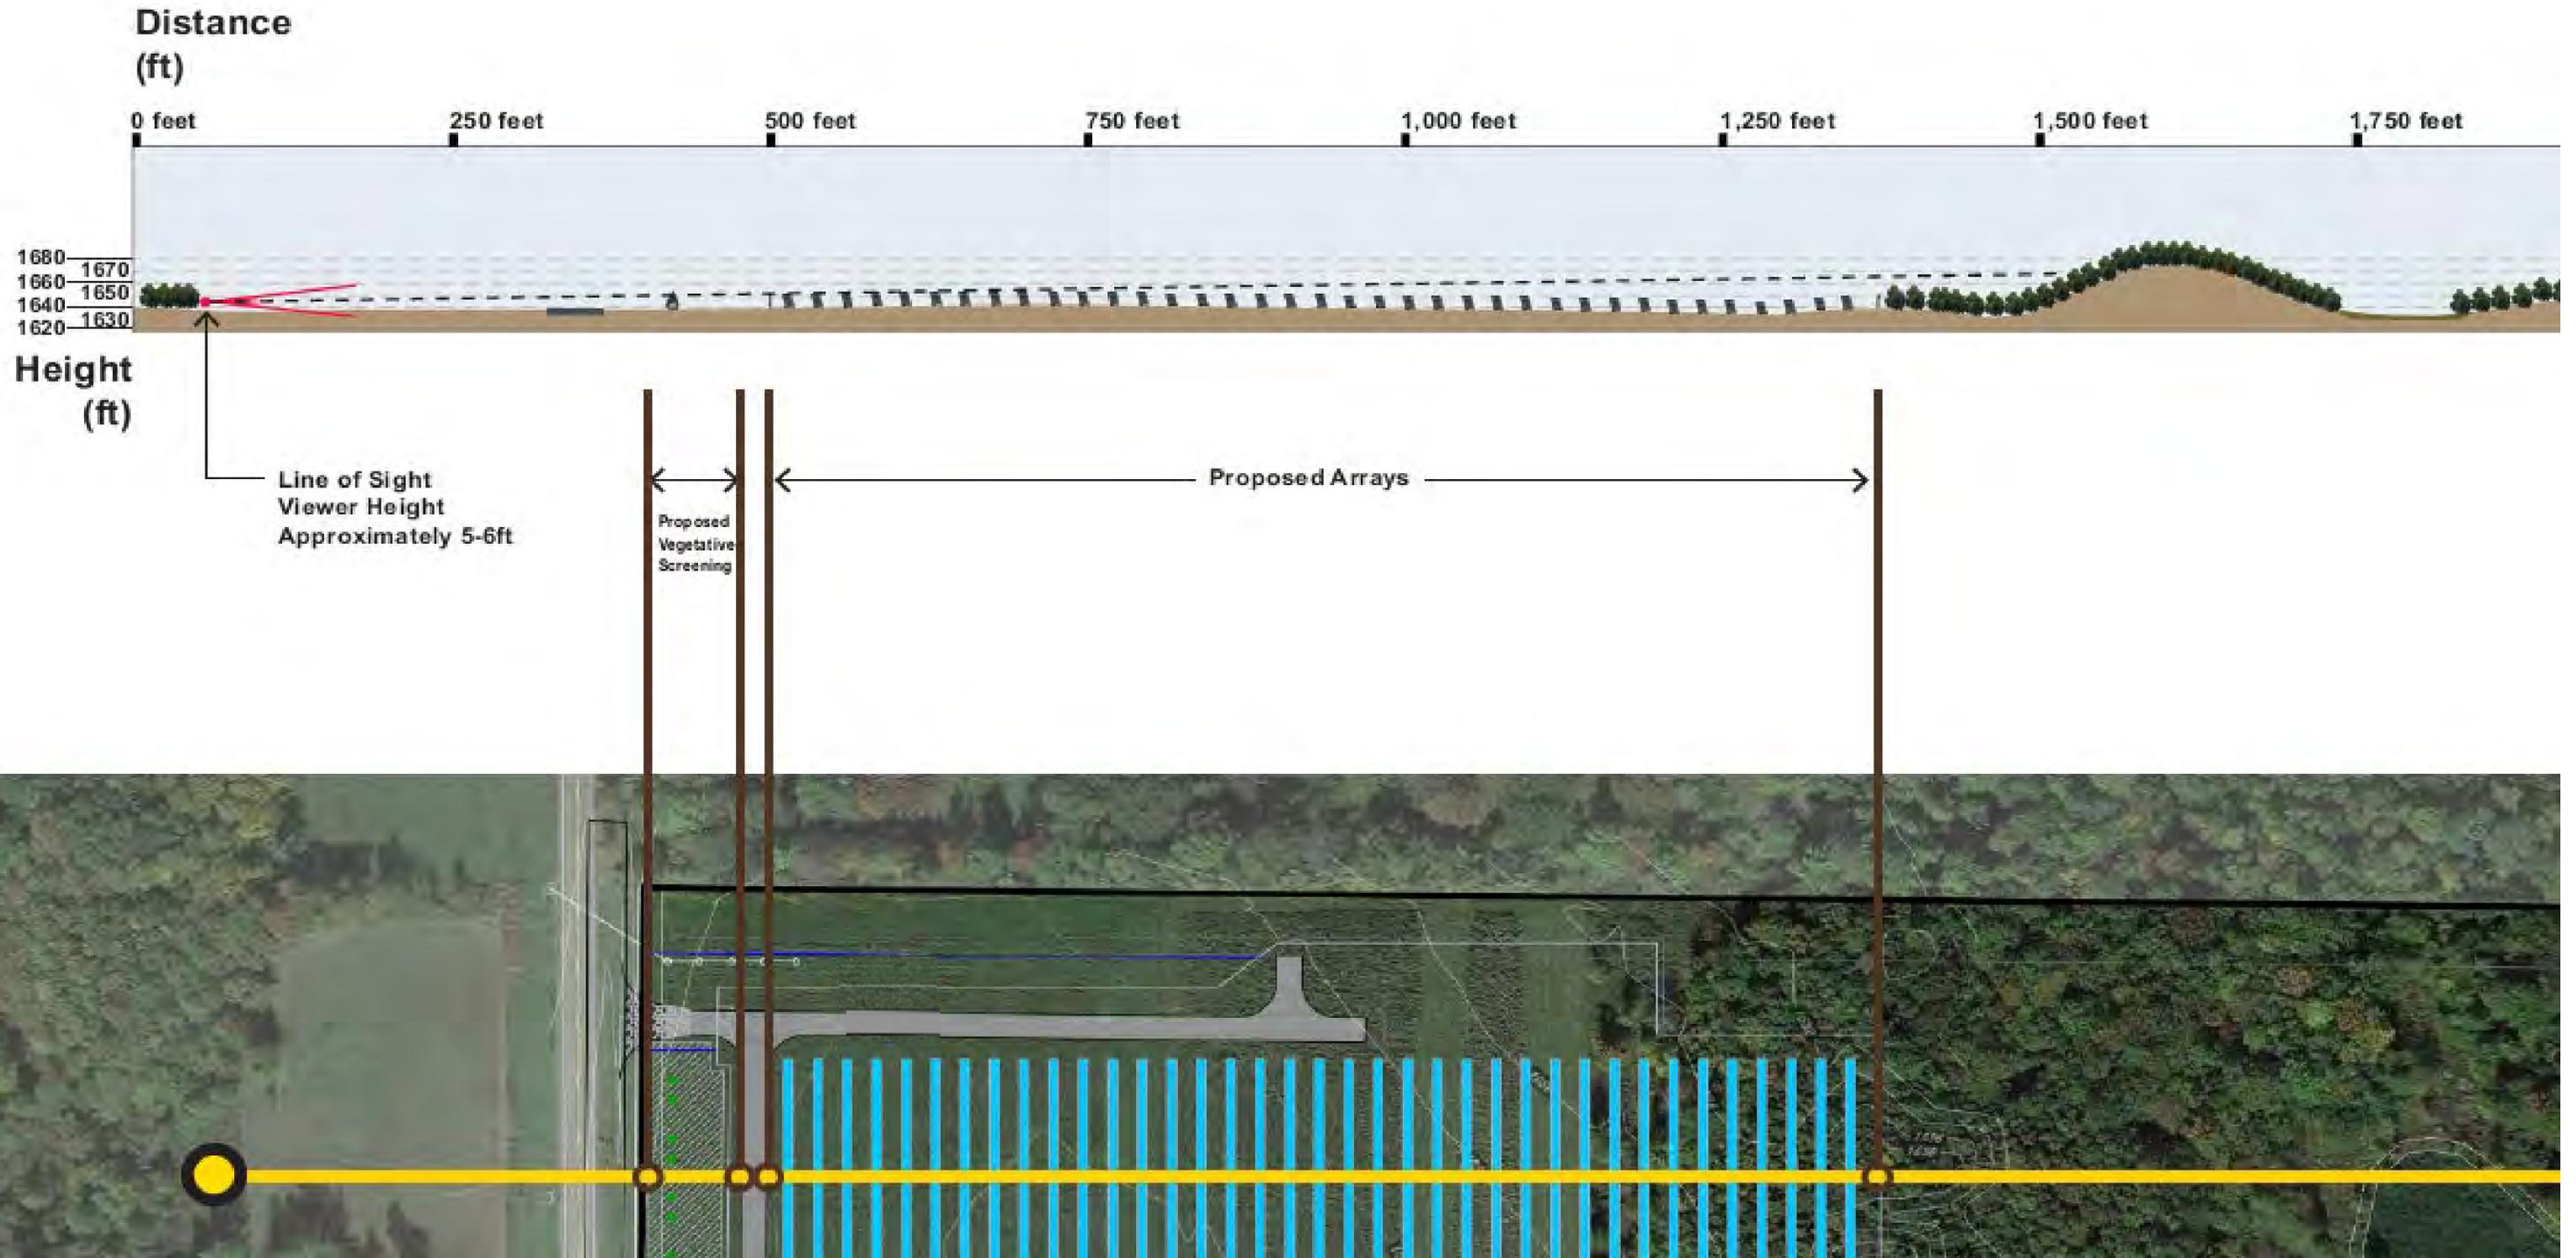

Visual Impact Assessment (VIA) to determine extent and assess the significance of Project visibility using a two-mile Visual Study Area (VSA):

- To be completed based on Site layout
- Identification of visually sensitive resources
 - Viewshed mapping
 - Line-of-sight mapping
- Visual Simulations
 - Prepared from public vantage points with representative Project views
- Glare analysis and FAA consultation
- Landscaping plan, where required, may include:
 - Visual/vegetation mitigation and screening

Line-of-sight example

Visual Resources: Line-of-sight example

Cultural Resources Investigations

Cultural Resources Phase IA Investigation (July 2021)

- Investigation conforms to applicable regulations and guidelines (36 CFR 800 and NYAC 1994).
- One recorded archaeological site within the Project Area.
- Nine recorded archaeological sites within five miles of the Project Area.
- Four archaeological sites are depicted within the Project Area on a 1983 construction sheet for the then-proposed Somerset Station. (Not noted in New York Database)

Cultural Resources Phase IB Investigation (Fall/Winter 2021) Field Survey

- Archaeologically sensitive zones
- Areas of proposed significant ground disturbing activities
- Excludes site of the decommissioned Somerset Station

Sound Studies

- Ambient sound levels in the Project Area are measured at multiple locations
 - Leaf-on conditions
 - Leaf-off conditions
- Sound level modeling of construction and operational noise from solar facility
- Section 94-c Exhibit 7 to include full technical report:
 - Sources and residences in the Project Area
 - Modeling results
 - Comparison to Section 94-c criteria at residences and property lines

Representative Sound Levels

12.15.21 Somerset Solar Virtual Community Meeting (VCM): Meeting Recording & Full Transcript*

*Transcript generated by Zoom Webinars platform – not cleaned.

A video recording of this community meeting is available at this link:

<https://www.tinyurl.com/SomersetVCMRecording>

1

00:00:21.030 --> 00:00:34.200

Neely Kelley: Welcome to those of you who have joined the Somerset solar virtual Community we're going to get started in about a minute folks are still signing in so thanks for so much for taking the time.

2

00:00:35.250 --> 00:00:36.570

Neely Kelley: to join us tonight.

3

00:00:59.760 --> 00:01:19.110

Neely Kelley: Alright we'll go ahead and get started, so good evening everyone, welcome to the Somerset solar virtual Community meeting, my name is neely Kelly, and I am the stakeholder relations manager for New York and the Northeast for eight yes and i'm based in Rochester New York next slide please.

4

00:01:20.790 --> 00:01:28.800

Neely Kelley: A few housekeeping items, the meeting the last one hour Please submit your questions in the zoom Q amp a.

5

00:01:29.460 --> 00:01:44.820

Neely Kelley: If you can't access the Q amp a feature submit questions via email to Somerset solar at as calm will be monitoring this email throughout the meeting and we've already had a few questions come in that we will be addressing first.

6

00:01:46.440 --> 00:01:55.110

Neely Kelley: Use the live transcript feature to view closed captions a recording of this meeting will be made available on the project website.

7

00:01:55.590 --> 00:02:13.680

Neely Kelley: Along with the presentation slides and a transcript of the Q amp a quick note about the questions we are committed to answering the question all the questions that are asked, and if they go past seven o'clock we will continue continue on next slide please.

8

00:02:15.660 --> 00:02:24.930

Neely Kelley: So the purpose of tonight's meeting is to present project information and updates provide information on the New York state 94 see permitting process.

9

00:02:25.530 --> 00:02:34.320

Neely Kelley: inform the Community about next steps in project development and how you can get involved and to fulfill the public engagement component of 94 see.

10

00:02:35.220 --> 00:02:47.160

Neely Kelley: As much as we would have loved to have been in person out of an abundance of caution regarding the coven pandemic, we decided to hold this meeting for the safety of virtually for our team and the local community.

11

00:02:47.700 --> 00:02:59.790

Neely Kelley: And although we aren't in person, the Somerset team solar team is committed to being accessible to the Somerset community and look forward to engaging with you in person, when it is safe to do so next slide please.

12

00:03:01.530 --> 00:03:04.560

Neely Kelley: This is your panel of presenters this evening.

13

00:03:05.790 --> 00:03:09.540

Neely Kelley: And now I will turn it over to my colleague right Hastings.

14

00:03:12.210 --> 00:03:12.480

Brett Hastings: daily.

15

00:03:14.370 --> 00:03:23.040

Brett Hastings: bread Hastings from done bliss New York, I live about an hour and a half south of the town of Somerset and.

16

00:03:23.940 --> 00:03:40.410

Brett Hastings: Honestly, I wish I was an hour and a half north of summers of bliss right now, so you know being getting the opportunity to meet live with with folks at this meeting, unfortunately, as neely mentioned to the coven were relegated to having this meeting virtual but.

17

00:03:41.430 --> 00:03:58.020

Brett Hastings: regardless, we will take it i'll take you through the agenda and make sure that there's plenty of time to get all the questions answered, and you know as neely mentioned as well, those those questions will be will be put together and put on a website for review in the future.

18

00:03:59.040 --> 00:04:03.150

Brett Hastings: So briefly i'll be taking you through about it, yes, so i'll be taking you through a brief.

19

00:04:04.260 --> 00:04:14.790

Brett Hastings: intro and the company that will have a project overview from our development manager and also then going or Council will take us through a regulatory overview of 94 see.

20

00:04:16.020 --> 00:04:26.040

Brett Hastings: there'll be some interests and topics, based on the environmental studies that we've done for the project and, as I mentioned before they'll be a Q amp a session afterwards.

21

00:04:27.090 --> 00:04:31.170

Brett Hastings: So if you don't mind when the next slide i'll just take you briefly through as.

22

00:04:33.060 --> 00:04:37.110

Brett Hastings: So, as is a publicly listed multinational power company.

23

00:04:38.370 --> 00:04:53.040

Brett Hastings: Over 1000 people and the company really believes in and is committed to clean, renewable energy and as it, as we have it, as it is the only company multinational company power company that's headquartered in the US.

24

00:04:54.660 --> 00:04:58.080

Brett Hastings: We have 32 gigawatts of operating capacity.

25

00:04:59.280 --> 00:05:06.720

Brett Hastings: You know that's that's that's that's a lot of gigawatts so what's a gigawatt a gigawatt is 1000 megawatts what's a megawatt.

26

00:05:07.260 --> 00:05:23.790

Brett Hastings: megawatt if you want to think about it, it can empower between 345 hundred homes per megawatt and we have 32,000 operating megawatts and, if you want to go the next slide we can talk a little bit about the clean energy group.

27

00:05:25.260 --> 00:05:35.430

Brett Hastings: So as clean energy is the business unit inside of it, yes, that we represent, and you know as part of the huge commitment that he has made to renewables.

28

00:05:35.970 --> 00:05:44.610

Brett Hastings: As an example, you can see, in New York, our operating portfolio is 800 megawatts and we have a development portfolio of two gigawatts.

29

00:05:45.300 --> 00:06:01.080

Brett Hastings: throughout the rest of the company, we have 4.8 gigawatts of operating of an operating portfolio, so we have a very, very large and diverse clean energy group that to show that, as is very committed to producing clean energy.

30

00:06:02.790 --> 00:06:04.260

Brett Hastings: Next, what we'll do is.

31

00:06:05.610 --> 00:06:20.370

Brett Hastings: Mario is going to take you through the project and give you a little bit of overview and give you an opportunity to understand a little bit more of the project, and this is going to be, you know, a change from last time we met, which was, which was live.

32

00:06:21.480 --> 00:06:35.160

Brett Hastings: And we integrated a lot of the Community outreach concepts that came in from that meeting, and I think you'll see the modifications For those of you that were there last time, Mario you want to take that over yeah.

33

00:06:35.460 --> 00:06:46.290

Mario Rice: hey everyone you got a Mario rice here i'm a associate developer here with as I currently live down in brooklyn New York, but grew up in the Hudson valley next slide please.

34

00:06:48.120 --> 00:06:58.320

Mario Rice: So this is a summer said solar project overview based on our most current design the summer said solar project is anticipated to be about 135 megawatts.

35

00:06:58.920 --> 00:07:07.080

Mario Rice: it's located at the former summer said coal power plants station, originally a larger system was planned at around 150 megawatts.

36

00:07:07.890 --> 00:07:21.990

Mario Rice: But with avoidance of wetlands and other environmental constraints at the overall capacity has been reduced to 135 megawatts with the project footprint of around 1000 megawatts the project will reduce CO2 emissions.

37

00:07:22.830 --> 00:07:30.150

Mario Rice: by approximately 160 9000 metric tons per year and will produce enough electricity to power 30,000 homes per year.

38

00:07:31.260 --> 00:07:39.480

Mario Rice: On this project has an expected commercial operation date cod q3 of 2024 next slide please.

39

00:07:42.120 --> 00:07:50.910

Mario Rice: So the expected project timeline a development of this project of this size takes years to complete you know we started developing this project in 2019.

40

00:07:51.330 --> 00:07:57.630

Mario Rice: And it's still ongoing we've been performing the necessary environmental due diligence on the project site for the last couple of years.

41

00:07:58.500 --> 00:08:15.180

Mario Rice: These studies will help us minimize environmental impacts, as well as much as possible and wherever wherever possible data collected from these studies will help to inform the site design and engineering, which will help to kind of avoid the impacts as much as possible.

42

00:08:18.030 --> 00:08:22.950

Mario Rice: As of today, we're hoping to submit this application q1 of 2022.

43

00:08:24.450 --> 00:08:41.790

Mario Rice: Targeting late February early March, following that and estimated construction start of q3 2023 and estimated cod of q3 2020 for this project will be submitted through the 94 see permit application process with orange.

44

00:08:44.340 --> 00:08:45.390

Mario Rice: Next slide please.

45

00:08:48.600 --> 00:08:55.140

Mario Rice: Summer said, this is the preliminary Somerset project layout pictured here is our most current project layout.

46

00:08:55.680 --> 00:09:07.350

Mario Rice: As you can see that the dark colors represent the actual solar array locations purple represents the site boundary dark blue is existing fence, while Teal is the proposed fence.

47

00:09:07.920 --> 00:09:18.840

Mario Rice: yellow lines represent access roads and red lines and circles represent 94 c's setbacks were you utilizing only properties owned by the Somerset operating company.

48

00:09:20.280 --> 00:09:27.000

Mario Rice: The solar farm will consist of three types of racking systems are validated fixed tilt as well as tracking.

49

00:09:28.260 --> 00:09:35.250

Mario Rice: Where possible we're trying to use existing fence line existing access rose to limit as much impact as possible.

50

00:09:36.720 --> 00:09:42.840

Mario Rice: You can see we've carved out around 11 acres around the babcock house parcel and i've also left.

51

00:09:43.860 --> 00:09:51.630

Mario Rice: ample amount of room in the along the shoreline for a plan Somerset park in the future as well as rails to trails.

52

00:09:53.070 --> 00:10:01.020

Mario Rice: Additionally, will be utilizing vegetative screening wherever it's needed, and you know we do plan on speaking with the town and getting their input on that.

53

00:10:02.070 --> 00:10:20.310

Mario Rice: And in the new year we're will also be engaging neighbors try and figure out who will be the most impacted and offering good neighbor agreements, where necessary, this project ultimately all will result in the good reuse of a shut down coal power plant.

54

00:10:22.470 --> 00:10:23.370

Mario Rice: Next slide please.

55

00:10:25.230 --> 00:10:26.520

Mario Rice: economic benefits.

56

00:10:28.110 --> 00:10:31.890

Mario Rice: This project will have numerous economic benefits to the county and the local community.

57

00:10:32.610 --> 00:10:37.860

Mario Rice: Along with \$200 million in capital investment, the town county and school district will see an estimated.

58

00:10:38.520 --> 00:10:50.940

Mario Rice: 10 plus million dollars in revenue over 20 years that attacks revenue comes at no cost the taxpayers, unlike other large developments there's no added water, no new server connections and no added students to the school districts.

59

00:10:52.590 --> 00:10:59.760

Mario Rice: were also planning on entering a host community agreement with the town of Somerset which will help provide additional known revenue to the town over a fixed number of years.

60

00:11:00.600 --> 00:11:17.190

Mario Rice: The construction phase of the project will add 150 plus jobs link to two to three full time jobs at cod there also be an influx and local spending during that construction period specifically local restaurants, hotels hardware stores they'll all see an increase in traffic.

61

00:11:18.270 --> 00:11:24.150

Mario Rice: Local residential utility customers will also see a savings of \$500 per megawatt.

62

00:11:25.980 --> 00:11:31.110

Mario Rice: per year distributed among all residential utility customers within the town of Somerset.

63

00:11:32.640 --> 00:11:34.290

Mario Rice: I believe the next slide is you Mike.

64

00:11:37.320 --> 00:11:44.820

Mike Farrell: Great thanks Mario that's really a good overview and thanks for that and remind everyone, they can submit questions.

65

00:11:45.840 --> 00:11:47.640

Mike Farrell: it's great to be able to talk to everyone again.

66

00:11:48.960 --> 00:12:04.980

Mike Farrell: we'll get to some of the activities that we've undertaken to meet directly with the public, including a open House in June of 2021 it kind of feels like yesterday it was great to see everyone in person, and we look forward to seeing everyone in person again soon.

67

00:12:06.330 --> 00:12:19.320

Mike Farrell: As values their their relationship is being a good neighbor and partner we develop on and operate projects for the life and therefore that's why we want to make sure that we're good we're good neighbors and good Community members and projects where we're developing.

68

00:12:20.880 --> 00:12:35.100

Mike Farrell: be engaged a local schools and communities and trying to sponsor local events, just like a good neighbor would and one thing that we, we also are we're going to be following is something that was from the article 10 process, which is a public involvement plan.

69

00:12:36.840 --> 00:12:43.860

Mike Farrell: We have committed, although not required a 94 see we have committed to sort of follow a lot of the pip requirements, because I think it's a good way to sort of.

70

00:12:44.340 --> 00:12:52.350

Mike Farrell: track and hold us accountable for certain Community engagement responsibilities we're going to support local initiatives.

71

00:12:53.040 --> 00:12:59.760

Mike Farrell: One such thing is, we were actually going to be working with the Barker school district and offering some stem curriculum materials.

72

00:13:00.150 --> 00:13:09.450

Mike Farrell: And we've had some initial discussions with the with the school leadership there and we welcome other other suggestions for how we can get involved next slide please.

73

00:13:11.430 --> 00:13:14.250

Mike Farrell: This just a quick summary of what we've kind of done so far.

74

00:13:15.690 --> 00:13:16.800

Mike Farrell: And you know, obviously.

75

00:13:18.360 --> 00:13:26.580

Mike Farrell: You know, we will continue to engage, but just show we had the open house in person open House in June to meet public at the firehouse it was a great event.

76

00:13:28.020 --> 00:13:38.700

Mike Farrell: Obviously, there was no no mention of oma crown or any other other variants at that at that event and went went really well, so I think we enjoyed speaking with the public, there and we look forward to doing again soon.

77

00:13:40.050 --> 00:13:49.740

Mike Farrell: Earlier today I actually met with the town supervisor and other county representatives to talk about the project as far as a meeting that's required as part of the 94 see.

78

00:13:50.730 --> 00:13:56.850

Mike Farrell: process also over the past couple of years you've met with landowners, the town board members.

79

00:13:57.240 --> 00:14:05.190

Mike Farrell: Other nagar county officials and other Community stakeholders, for example, save Ontario shores and met with them a few times and then other community groups.

80

00:14:06.150 --> 00:14:14.190

Mike Farrell: and also those in connection with rails to trails and other people that are obviously you know focus on making the the town of Somerset in the.

81

00:14:14.520 --> 00:14:22.080

Mike Farrell: village of Barker a better place and we're committed to that as well, some of the issues of local concerned that we're obviously really focused on and going to help out.

82

00:14:22.890 --> 00:14:33.690

Mike Farrell: Wherever possible, is you know the babcock house and making sure that we've we've already increased our setbacks on panels we're going to provide access to access to the water.

83

00:14:34.320 --> 00:14:44.070

Mike Farrell: Potential access to the Somerset park the park is going to be located, if you looked at the layout the park is located in the sort of northeast quadrant of the property.

84

00:14:45.240 --> 00:14:51.630

Mike Farrell: Not quite fully East but northeast where you see there's a landfill and it's got short run lakefront property.

85

00:14:52.500 --> 00:14:56.520

Mike Farrell: We will promote that park over impossible, and obviously access to that park as well.

86

00:14:57.270 --> 00:15:09.870

Mike Farrell: One of the things that we took into account feedback from the open house and other talking to other stakeholders was supporting the rails to trails project you'll notice that the rail parcel that south of 18 does not have any panels on it.

87

00:15:11.040 --> 00:15:17.580

Mike Farrell: That entire parcel previously, we had considering putting panels on at least the some portion of that parcel.

88

00:15:18.510 --> 00:15:23.430

Mike Farrell: We tested it one, there are some wetland concerns, but also to we listened to the Community.

89

00:15:23.760 --> 00:15:29.850

Mike Farrell: think there were some there were some tree issues or some other other issues with the Community at the fourth southern end of that real parcel.

90

00:15:30.300 --> 00:15:40.020

Mike Farrell: And we are not putting panels there based on that feedback and we are going to be actively you know, supporting the rails to trails program and talk to local community stakeholders about pursuing that Program.

91

00:15:40.740 --> 00:15:53.670

Mike Farrell: which hopefully will be done on that parcel once the the rail tracks get removed upon the full decommissioning of the Coal plant we've also talked to a local bird groups, we will consider and it's very unique.

92

00:15:55.140 --> 00:16:06.240

Mike Farrell: location on Lake Ontario and we've talked about dimming lighting and also providing bird feeders and other and other activities and that dialogue will be ongoing as far as what we do, as far as accommodating.

93

00:16:06.930 --> 00:16:14.430

Mike Farrell: You know, avian issues and avian concerns and we recognize that and will be planning for that, and as we designed the project.

94

00:16:15.600 --> 00:16:16.560

Mike Farrell: Next slide please.

95

00:16:18.930 --> 00:16:20.910

Mike Farrell: So one thing I want to point out here is.

96

00:16:21.930 --> 00:16:31.890

Mike Farrell: These events, whether the in person open house or whether this virtual Community event, these these are just one in many different ways, you can reach out to us this isn't the only time you can ask questions.

97

00:16:32.280 --> 00:16:42.330

Mike Farrell: This isn't the only time that you can speak with us we've tried to make it relatively very accessible for folks to to reach out to us we've got virtual office hours there's a project website.

98

00:16:43.350 --> 00:16:58.740

Mike Farrell: And there's an email and toll free number, and all of those things if you leave a message we commit to get back to you as soon as possible so don't look at this as your only one shot to ask a question we're sort of fully accessible outside of the virtual commuting or open house hours.

99

00:16:59.940 --> 00:17:00.840

Mike Farrell: Next slide please.

100

00:17:02.790 --> 00:17:08.130

Mike Farrell: So now handed to to Steve Wilson with young summer we'll talk about some other regulatory or review.

101

00:17:11.550 --> 00:17:28.140

Steve Wilson: I thanks Mike good evening everyone like Mike said, my name is Steve Wilson i'm with the law firm of young summer we're located in Albany New York, and we are assisting as with the permitting process for the summer said solar facility next slide please.

102

00:17:29.760 --> 00:17:34.620

Steve Wilson: So during the course of this presentation we've heard terms like.

103

00:17:35.100 --> 00:17:45.120

Steve Wilson: 94 see an article 10 so this slide i'm going to go through these processes and try to explain the difference between the two and in how the Somerset facility will be permitted.

104

00:17:45.540 --> 00:17:56.730

Steve Wilson: So in 2020 New York state introduced a new permitting process for large scale renewable projects that and that's what we've been referring to as the 94 see process.

105

00:17:57.120 --> 00:18:08.430

Steve Wilson: And 94 C is actually section 94 see of the New York state executive lot So if you wanted to see the actual wording of 94 see that's where you would find it in the executive law.

106

00:18:09.330 --> 00:18:19.230

Steve Wilson: Under 90 foresee decisions on whether or not the issue of permit for a large scale facility is now made by the office of renewable energy, citing.

107

00:18:19.680 --> 00:18:40.470

Steve Wilson: And that's within the Department of State over as has their own regulations that they adopted earlier this year, those regulations were adopted after public comment, and they were issued on march 3 as boat number two states so prior to a 994 seat process.

108

00:18:41.610 --> 00:18:51.720

Steve Wilson: There was Article 10 and as the next bullet states if you were an article 10 you can treat 94 see offered you the ability to transition into 94 see from Article 10.

109

00:18:52.260 --> 00:18:59.970

Steve Wilson: Or you could remain in the article 10 process article 10 is Article 10 of the New York state public service law which from.

110

00:19:01.410 --> 00:19:13.200

Steve Wilson: 12 until 2020 when when 94 see came into effect, what was the sighting process for any any large scale facility over 25 megawatts.

111

00:19:14.250 --> 00:19:24.810

Steve Wilson: Now anything going forward now after you know 94 see with put it put into law now everything will go through the 94 see process like the Somerset facility.

112

00:19:25.530 --> 00:19:37.470

Steve Wilson: So, as the bold cut bullet states 94 see has certain requirements about pre application consultations with state agencies host municipalities in meetings with Community members.

113

00:19:38.610 --> 00:19:49.410

Steve Wilson: there's certain minimum requirements that are contained within the regulations, one is that we that an applicant hold meetings at least 60 days prior to submitting an application.

114

00:19:50.490 --> 00:20:06.150

Steve Wilson: 94 she really only has that one requirement, but as Mike said a yes has and remains committed to having multiple meetings with the host municipalities and Community members to discuss the project as much as possible before filing the application.

115

00:20:07.170 --> 00:20:24.750

Steve Wilson: So the next bullet refers to use which are uniform standard and conditions that will be ultimately contained in a draft permit for the project and i'll get into that and you'll it'll be understood, a little bit more when we get to the process slide which I think is next but.

116

00:20:25.920 --> 00:20:39.840

Steve Wilson: Over as we're standardizing large scale renewables now by having a set of uniform standards and conditions and those standards and conditions are designed to to minimize as an expert says.

117

00:20:40.350 --> 00:20:52.920

Steve Wilson: to the maximum extent practicable significant adverse environmental impacts, so the uniform standard conditions will have standard will have conditions, addressing wet ones threatened or endangered species.

118

00:20:53.460 --> 00:21:06.510

Steve Wilson: Would specifics with bald eagles BATs breeding birds, etc, so those standard conditions are for basically the baseline of a draft permit that over as will will issue.

119

00:21:06.900 --> 00:21:12.930

Steve Wilson: And then, as the bullet states certain projects will require site specific requirements that are.

120

00:21:13.920 --> 00:21:26.460

Steve Wilson: unique to a particular project and not necessarily covered by the uniform standards, and so what draft permit will contain those as well and in like I said, this will be further explain as we go forward, so why don't we go to the next slide.

121

00:21:28.140 --> 00:21:40.320

Steve Wilson: yeah here's the process slide so 90 foresee, we as will be filing an application at this point, we are in the box, that is in red, that is.

122

00:21:41.820 --> 00:21:46.290

Steve Wilson: outlined in red, we are in, we are having a pre application consultation.

123

00:21:48.210 --> 00:22:01.530

Steve Wilson: Between now and the application submission allows going to happen there's going to be additional consultations with the host municipalities with the fire departments, with the local historic preservation officer.

124

00:22:02.820 --> 00:22:17.070

Steve Wilson: With the schools emergency service providers and that's just to name a few, but these consultations and the studies that are being conducted are going to form the basis of the application that will be submitted in the second box.

125

00:22:17.580 --> 00:22:22.920

Steve Wilson: And and i'll just go through the rest of these fairly quickly problem most important.

126

00:22:24.210 --> 00:22:31.800

Steve Wilson: For those on the phone and for the for the toast municipalities in the county is the is the third box, which is intervene or funding.

127

00:22:32.130 --> 00:22:38.850

Steve Wilson: And we have another slide on that further round, but i'll touch on it here when the application submitted as will submit.

128

00:22:39.330 --> 00:22:50.370

Steve Wilson: intervene or funding and the amount of 130 \$5,000 75% of which will go to host municipalities counties basically local agencies is that term is defined in the.

129

00:22:50.730 --> 00:23:01.380

Steve Wilson: In the 94 see regs and and 25% of that will be remain available for other interviewers in the Community so once the application submitted.

130

00:23:01.830 --> 00:23:15.570

Steve Wilson: Over as will do a completeness review within 60 days if it's not complete they'll notify the application, the applicant a yes and as will go back and prepare supplemental materials and that process will continue until all races, the application is complete.

131

00:23:17.310 --> 00:23:34.770

Steve Wilson: Eventually, when when it is complete over this issue draft issue a draft permit once that draft permit is issued around that time overs will also send notice out seeking public comment and requesting us a statement from the host municipalities and the county.

132

00:23:35.940 --> 00:23:52.470

Steve Wilson: A statement with respect to the projects compliance with local laws so essentially over as will make an issues determination, there also is an assigned to the case if there are material issues of fact the lj may schedule evidentiary hearings.

133

00:23:53.790 --> 00:23:59.040

Steve Wilson: And then downtown then once those are concluded right there like there'll be recommended decision and hearing report.

134

00:23:59.670 --> 00:24:15.300

Steve Wilson: All of these boxes should be accomplished within one year after the completeness determination, once all is said and done, there will be some compliance filings made and then eventually construction and, once all those components filings have been made so next slide please.

135

00:24:18.630 --> 00:24:23.040

Steve Wilson: yeah as part of the 94 see application it's exhibit 24.

136

00:24:24.870 --> 00:24:31.560

Steve Wilson: The applicant is required to provide a list of all the substantive local laws that could be applicable to the project.

137

00:24:31.980 --> 00:24:39.090

Steve Wilson: Now a substantive law is something like a setback that says, you have to be 100 foot having 100 foot step back from the property line.

138

00:24:39.750 --> 00:24:46.080

Steve Wilson: that's opposed to a procedure law which, which is basically you have to obtain a building permit before you build something so.

139

00:24:46.770 --> 00:24:59.550

Steve Wilson: applying for building is building permits procedural substantive is something that you have to be 100 feet away from something so we need to list all the substantive local laws from the host municipality in the county in the application.

140

00:25:00.900 --> 00:25:16.680

Steve Wilson: Similar to article 10 as can request that over as not apply any local waters unreasonably burdensome in view of the climate leadership and Community protection act targets in environmental benefits of the project.

141

00:25:19.590 --> 00:25:20.280

Steve Wilson: The.

142

00:25:21.330 --> 00:25:30.060

Steve Wilson: Then, as I mentioned in the previous slide the last municipalities will eventually be required to submit a statement of compliance, which, which is basically.

143

00:25:30.870 --> 00:25:40.710

Steve Wilson: You know they'll submit comments to state whether or not we've identified all substantive local laws and for those that we stake that we comply with whether or not they agree with our with our compliance.

144

00:25:42.210 --> 00:25:55.320

Steve Wilson: Next bullet again just reiterate that there will be an intervene or fund \$1,000 per megawatt or 130 \$5,000 75% from municipalities, on the day we submit the application.

145

00:25:56.400 --> 00:26:09.780

Steve Wilson: There will be a ruling issued by the administrative law judge assigned to the proceeding that ruling will advise parties that there was the 30 day clock begins for the submission of requests for interviewing or funding.

146

00:26:12.240 --> 00:26:28.950

Steve Wilson: And also, in the last bullet just mentioned that, as part of the 94 seat process in the standard conditions there will be a required host community benefit that can take the form of a pilot agreement or additional benefits that are negotiated with the municipality.

147

00:26:30.300 --> 00:26:37.860

Steve Wilson: But there will be a requirement for some kind of host community benefit in the permit that's eventually issued as the next slide please.

148

00:26:40.020 --> 00:26:45.150

Steve Wilson: And here's just basically a list of all of the exhibits that go into an application.

149

00:26:46.230 --> 00:26:57.060

Steve Wilson: there's 25 overall yeah I probably should have uploaded to this presentation, a picture of an actual 94 see application and all the volumes that it entails.

150

00:26:57.420 --> 00:27:05.490

Steve Wilson: These applications are are significant they're very large each one of these exhibits has numerous dependencies.

151

00:27:06.000 --> 00:27:21.540

Steve Wilson: tables figures maps and just to study results themselves so when all added together these these applications are very large but, as you can see from the list of exhibits the application really addresses all issues.

152

00:27:23.220 --> 00:27:34.320

Steve Wilson: With respect to facility from noise to wetlands to threaten endangered species to you know to social net economic effects so next slide please.

153

00:27:37.350 --> 00:27:54.150

Steve Wilson: These two boxes it just be aware, please, that the exhibit 23 of the application will will contain decommissioning and site restoration plan and that plan will basically detail how the facility will be removed at the end of its useful life.

154

00:27:55.470 --> 00:28:03.240

Steve Wilson: So, just in case there was any questions as to whether or not there will be a plan to take this facility out when it when it's no longer used, yes, there will be.

155

00:28:04.530 --> 00:28:05.010

Steve Wilson: That.

156

00:28:06.030 --> 00:28:11.580

Steve Wilson: That plan will outline how would it be removed and it'll establish the security.

157

00:28:12.810 --> 00:28:21.900

Steve Wilson: of either in a form of a letter of credit or bond which which the host community municipality can draw upon to remove the facility, if need be so.

158

00:28:22.260 --> 00:28:37.500

Steve Wilson: That will all be put in place so that the the you know, there should be no worries that anybody will ever walk away and leave this facility there, there will be a security available for the town of drawn and again pre construction compliance filings.

159

00:28:39.090 --> 00:28:39.510

Steve Wilson: That.

160

00:28:41.250 --> 00:28:48.210

Steve Wilson: That just is added to show that, after the draft permanent issue, there will be a number of compliance filings anything that's not final in the application.

161

00:28:48.990 --> 00:28:58.680

Steve Wilson: will be submitted as a compliance filing prior to commencement of construction, and it was compliance filings are subject to approval by all risks next slide please.

162

00:29:01.680 --> 00:29:03.240

Steve Wilson: And this just list.

163

00:29:05.130 --> 00:29:16.980

Steve Wilson: To show the viewers, the laws that we looked at when we compile the list of substantive requirements we are sending correspondence to the to the host municipalities, the town in the county.

164

00:29:18.270 --> 00:29:22.830

Steve Wilson: identifying all the substantive laws that are that we found.

165

00:29:23.940 --> 00:29:34.980

Steve Wilson: In will last the municipalities to in the county to to double check what we've done and to point out anything that they think we've missed and and these bullets show.

166

00:29:35.460 --> 00:29:40.500

Steve Wilson: Everything that we've looked at so we've looked at the town Code, the town solar law.

167

00:29:41.460 --> 00:29:50.910

Steve Wilson: Including the proposed town solar law which, at present, has not been enacted and the town of Somerset comprehensive plan, I can say we've also looked at the local waterfront.

168

00:29:51.300 --> 00:30:06.300

Steve Wilson: revitalization plan the vision map so we're taking everything into consideration, so not just as it exists today but division that the town has for the future to to design and plan is facility so next slide please.

169

00:30:08.760 --> 00:30:16.560

Steve Wilson: and intervene or funding a little more and intervene or funding a this is available basically to as it states intervene owners.

170

00:30:17.340 --> 00:30:20.580

Steve Wilson: To participate in the proceeding and and in these funds.

171

00:30:21.150 --> 00:30:31.110

Steve Wilson: You need to apply for them within the first 30 days soon thereafter I think it's usually about two weeks, the administrative law judge will will allocate those funds to everybody that applied.

172

00:30:31.830 --> 00:30:50.850

Steve Wilson: 75% will be for the municipalities, the other 25% or four remaining local innovators that money can be used for retaining experts consultants that can assist in intervening in in reviewing and understanding and application into.

173

00:30:52.530 --> 00:30:55.770

Steve Wilson: The pile comments to be submitted to over as at the appropriate time.

174

00:30:56.940 --> 00:31:01.260

Steve Wilson: And the address for applying for interviewing or funds is listed there.

175

00:31:02.280 --> 00:31:06.570

Steve Wilson: If you again this presentation will be on as his website so if you don't.

176

00:31:07.590 --> 00:31:14.130

Steve Wilson: You don't have to write it down Now you can get it from the website it's also available on all roses website, which is listed there.

177

00:31:15.480 --> 00:31:20.130

Steve Wilson: So there's and there's in the notices that will be filed I mentioned this to.

178

00:31:21.360 --> 00:31:25.620

Steve Wilson: 60 days before the application will be filed there'll be noticing in the local newspaper.

179

00:31:25.920 --> 00:31:31.500

Steve Wilson: This information will be in there as well, and then again three days before the application is filed.

180

00:31:31.770 --> 00:31:44.370

Steve Wilson: There will be another notice in the newspaper, where the mailing to land owners within a mile of the facility in these instructions for interviewing your funds will be in that notice as well, so there will be multiple notices and.

181

00:31:44.730 --> 00:31:53.400

Steve Wilson: going out with this information, so if you if you don't get it here like I said, you can find it or it will be mailed to you or you'll see it in the paper so next slide please.

182

00:31:55.680 --> 00:31:57.120

Steve Wilson: Oh, and that does it for me.

183

00:32:01.230 --> 00:32:02.100

Steve Wilson: off to.

184

00:32:02.190 --> 00:32:04.290

Jodi Hunt: Understand Casey I can take it from here.

185

00:32:04.320 --> 00:32:05.670

Steve Wilson: All right, great thanks Jody.

186

00:32:06.090 --> 00:32:06.510

sure.

187

00:32:08.070 --> 00:32:15.570

Jodi Hunt: All right, everybody, good evening, my name is Jody hunt and i'm a project manager with Tetra tech located in western New York.

188

00:32:16.080 --> 00:32:32.820

Jodi Hunt: Tetra tech is a consulting and engineering firm specializing in renewable energy projects and is working with a yes to provide not only the project engineering, but also the environmental due diligence activities, some of which i'm going to discuss on the slides that are coming up next.

189

00:32:34.050 --> 00:32:35.430

Jodi Hunt: You could switch the slide please.

190

00:32:37.470 --> 00:32:48.630

Jodi Hunt: Thank you, as was mentioned earlier in the presentation wetlands and water bodies are one of the elements that applicants are required to evaluate as part of the 94 see process.

191

00:32:49.740 --> 00:33:05.220

Jodi Hunt: A wetland and water body delineation was performed on the site in May of 2021 this past spring, it was compliant with the army corps of engineers delineation manual as well as the applicable regional supplement.

192

00:33:06.780 --> 00:33:25.560

Jodi Hunt: The first thing that I want to point out is that the site layout attempts and is successful in avoiding and minimizing impacts to wetlands and water resources and the image that you're seeing on the right side of your screen are those delineated butlins water bodies, etc.

193

00:33:26.670 --> 00:33:42.030

Jodi Hunt: What you should know about those that are map is that they are not New York state the EC jurisdictional map wetlands, so they were delineated in the field, but they are not mapped as state wetlands on any of this, the New York state databases.

194

00:33:43.740 --> 00:33:56.490

Jodi Hunt: In total, we found approximately 267 acres of butlins within the project area that includes streams and nine water bodies, some of them man made.

195

00:33:58.950 --> 00:34:08.940

Jodi Hunt: A site visit was very recently performed with a New York state or as representative that was on December 1 and he he.

196

00:34:10.080 --> 00:34:18.570

Jodi Hunt: confirmed our wetlands delineation boundaries and, subsequently, a report was submitted to us for review.

197

00:34:20.340 --> 00:34:29.940

Jodi Hunt: If required, after our final layout is completed a mitigation plan will be included in the application.

198

00:34:32.640 --> 00:34:33.780

Jodi Hunt: Next slide please.

199

00:34:37.260 --> 00:34:46.980

Jodi Hunt: In addition to one serving Tetra tech completed several wildlife studies, including a breeding bird survey and a winter raptor survey.

200

00:34:48.300 --> 00:34:57.840

Jodi Hunt: The breeding bird surveys were performed again this past spring early summer in accordance with the orange orange guidelines.

201

00:34:59.010 --> 00:35:09.120

Jodi Hunt: The winter raptor surveys obviously were conducted in the winter of 2022 2021 in accordance with the current nice deck protocols.

202

00:35:10.290 --> 00:35:29.670

Jodi Hunt: There were no State listed in danger or threatened species identified performing and essential behavior during these surveys and I want to explain what that means, because I know that that's a bit of a run on sentence so essentially what an essential behavior means is.

203

00:35:30.900 --> 00:35:47.940

Jodi Hunt: breeding hibernation reproduction feeding sheltering migration movement or overwintering and, again, there was no evidence that any threatened or endangered species were performing these behaviors at the site location during our surveys.

204

00:35:51.180 --> 00:36:11.430

Jodi Hunt: There is a known bald eagles nest that is north of the project area that is over a half mile away, and the project site completely avoid that area, there is, again, more than a half mile buffer between the project disturbance on that eagle's nest.

***Correction - the eagle's nest is about 1200 feet from our project site, not a half-mile

205

00:36:13.920 --> 00:36:31.800

Jodi Hunt: That habitat in the vicinity of the project area was also looked at, there is no potential habitat on the site location, currently, but that is something that we will obviously keep an eye on and deal with as project construction gets closer.

206

00:36:33.960 --> 00:36:35.070

Jodi Hunt: Next slide please.

207

00:36:38.970 --> 00:36:51.690

Jodi Hunt: Okay, a visual impact assessment is done to determine the extent and significance of the project visibility So how will the project be seen from outside of the project boundaries.

208

00:36:53.670 --> 00:36:58.920

Jodi Hunt: That visual impact assessment or VI a is completed, based on the site layout.

209

00:37:00.240 --> 00:37:18.450

Jodi Hunt: It identifies visually sensitive resources through you shed mapping line of sight mapping and visual simulations visual simulations are prepared from public vantage points within representative project us.

210

00:37:19.830 --> 00:37:42.690

Jodi Hunt: Also, we perform a glare analyses and consult with the FAA and were required a landscaping plan would include visual vegetation mitigation and screening, such as planting of trees wishes, etc, and, and this is a pretty specific part requirement of 94 see.

211

00:37:44.010 --> 00:37:49.050

Jodi Hunt: So if you want to go to the next slide there it's a bigger image of there we go.

212

00:37:50.460 --> 00:37:57.990

Jodi Hunt: What you're seeing here is called a line of sight analysis and, if you look at the lower part of this image, you see the yellow line.

213

00:37:58.380 --> 00:38:13.170

Jodi Hunt: The yellow dot represents where a person might be standing and if they were looking towards the solar project what they might see if they looked all the way across to the right side of the screen, so to speak.

214

00:38:13.710 --> 00:38:28.830

Jodi Hunt: And if you look to the top of this slide you can see the Little Red arrow that represents the person standing and what they would see again looking over that same representative.

215

00:38:29.280 --> 00:38:40.410

Jodi Hunt: landscape, where this was the solar project would be, and this takes into account things like existing vegetation proposed panel height.

216

00:38:41.280 --> 00:38:55.620

Jodi Hunt: Ground elevation any buildings that may be existing so it's sort of a real life simulation of what a person would be standing at whatever location is chosen for the line of sight.

217

00:39:03.390 --> 00:39:17.850

Jodi Hunt: Alright, so, in addition to those studies we've also done several cultural resources investigations, the first investigation called a phase one a son in July of 2021.

218

00:39:18.930 --> 00:39:24.930

Jodi Hunt: Again conforming with all of you clickable guidelines with New York state and auras.

219

00:39:26.130 --> 00:39:36.870

Jodi Hunt: There is one recorded archaeological site within the project area that archaeological site will be avoided completely and there is a buffer area around it.

220

00:39:38.400 --> 00:39:48.120

Jodi Hunt: There are nine recorded archaeological sites within five miles of the project area, so this is pretty typical of Western New York I think everybody is.

221

00:39:48.330 --> 00:40:05.190

Jodi Hunt: Pretty aware that there's a really rich archaeological history in western New York and so it's not unusual to have recorded archaeological sites around us all the time, these nine sites are not located anywhere near the project area they're outside of it.

222

00:40:08.070 --> 00:40:18.660

Jodi Hunt: For archaeological sites are depicted within the project area 1983 instruction sheet for the then proposed Somerset station.

223

00:40:19.920 --> 00:40:33.900

Jodi Hunt: These were found as we were digging through old records at the station they're not noted in any New York state database we we are digging, so to speak, to try to figure out.

224

00:40:35.190 --> 00:40:51.060

Jodi Hunt: If these are actual fines and if they were recognized or should be recognized by the state, however, again, the project will not encroach upon any of the four sites in that bullet point.

225

00:40:53.490 --> 00:41:06.300

Jodi Hunt: So following up on the phase one investigation, we just very recently this past Friday included our phase one be investigation, which is a field survey.

226

00:41:07.170 --> 00:41:26.760

Jodi Hunt: Where we actually do digging and shovel testing, much like you see on TV with archaeologists and we were specifically looking at archaeologically sensitive zones where there would be significant ground disturbing activities because of the solar project.

227

00:41:28.410 --> 00:41:41.280

Jodi Hunt: The the shovel testing was done in a grid pattern, under the direction of the New York state office of historic preservation.

228

00:41:46.710 --> 00:41:47.220

Jodi Hunt: Okay.

229

00:41:50.220 --> 00:41:50.580

yeah.

230

00:41:53.130 --> 00:42:02.100

Jodi Hunt: One of the other studies that were me are required to do as part of the 94 see application project is sound and vibration.

231

00:42:03.600 --> 00:42:17.160

Jodi Hunt: Ambient sound levels in the project area are measure in multiple locations, and this is done under two conditions, both with leaf on trees and leaf off trees.

232

00:42:17.700 --> 00:42:36.420

Jodi Hunt: that's because leaf on conditions, having a leaves on trees, can help to mute sounds a bit and you probably know this from your everyday lives, things seem louder in the winter, when there's no leaves blocking noises so we measure ambient sound in both of those conditions.

233

00:42:38.220 --> 00:42:53.340

Jodi Hunt: Sound level modeling of construction, as well as operational noise from the solar facility has to be modeled as part of the application, that is also done based on the site civil design.

234

00:42:56.040 --> 00:43:20.010

Jodi Hunt: And then included in exhibit seven to the application will be a technical report that includes sources and residences in the project area, the noise and vibration modeling results and comparison to section 94 see criteria at residences in property lines.

235

00:43:24.690 --> 00:43:32.970

Jodi Hunt: And then here's just a graph that i'm sure, a lot of you have seen images similar to this before representative sound levels.

236

00:43:34.110 --> 00:43:37.440

Jodi Hunt: And i've highlighted here what the typical.

237

00:43:38.700 --> 00:43:57.210

Jodi Hunt: Solar facility at the fence line is equivalent to and its really It ranges from a equivalent to a whisper all the way up to a normal conversation so probably about as much noise as i'm making right now, if you're standing right at the fence line of the project.

238

00:43:59.400 --> 00:44:00.780

Jodi Hunt: But this is.

239

00:44:01.980 --> 00:44:09.000

Jodi Hunt: right around what we would also expect to be ambient or even a little bit.

240

00:44:10.200 --> 00:44:16.980

Jodi Hunt: it's very similar to the ambient noise and we're expecting modeling to show that as well.

241

00:44:21.930 --> 00:44:28.650

Jodi Hunt: Alright, so i'm going to pass this back over to nearly her comments and questions.

242

00:44:29.490 --> 00:44:30.330

Neely Kelley: Thanks so much Jody.

243

00:44:31.470 --> 00:44:48.810

Neely Kelley: Okay we've had a number of questions come in and I will start with the ones that have been some that were submitted by email earlier today, are you still considering placing panels outside the current fenced area of the plant north of route.

244

00:44:50.310 --> 00:44:55.110

Neely Kelley: If so, what percent of capacity is planned outside the fence.

245

00:44:59.370 --> 00:45:00.810

Brett Hastings: So at this point.

246

00:45:03.090 --> 00:45:14.100

Brett Hastings: we're looking at putting approximately I believe it was 65% of the panels above route 18 and and the rest to the south of route 18.

247

00:45:14.580 --> 00:45:27.180

Brett Hastings: And I think you know if you were to take a look at the layout that we showed earlier, it gives you a little bit more detailed approach as as far as inside fans outside fence, you know to that point.

248

00:45:30.600 --> 00:45:42.180

Neely Kelley: Okay, what is the design capacity factor for this facility and what is the capacity factor of the panels arrange to track the sun versus those which are on stationary mounts.

249

00:45:44.550 --> 00:45:47.100

Brett Hastings: So capacity factors for solar projects.

250

00:45:47.400 --> 00:46:02.160

Brett Hastings: range in the low 20s and it's different technologies, very little bit depending on where you are geographically but you know, in the in the low to mid 20s is is a typical target range.

251

00:46:05.640 --> 00:46:10.740

Neely Kelley: What size and type of trees are you planning to plant and how many boats.

252

00:46:13.560 --> 00:46:15.750

Brett Hastings: God or josh do you guys want to talk to them.

253

00:46:20.790 --> 00:46:28.950

Jodi Hunt: yeah I can I can speak to this Jaffa didn't know if you were trying to unmute or not I didn't want to step on your toes there'll be a mixture, and we have.

254

00:46:29.790 --> 00:46:48.900

Jodi Hunt: You know, there are specific requirements for for how many trees and spacing requirements and best management practices for landscaping but it'll be a mixture of evergreens shrubs and these sorts of things will be done in collaboration with.

255

00:46:50.370 --> 00:46:55.380

Jodi Hunt: With with over as the requirements on 94 see.

256

00:46:57.180 --> 00:46:57.690

Brett Hastings: also be.

257

00:46:58.710 --> 00:47:02.430

Brett Hastings: meeting with the town on that as well, when that that design is put together.

258

00:47:02.850 --> 00:47:05.250

Brett Hastings: Correct great thanks Julie.

259

00:47:05.970 --> 00:47:15.990

Neely Kelley: Thanks dirty and Brett up what will be your setback, have any construction or transportation operation from the bald eagle nest on the property.

260

00:47:18.720 --> 00:47:20.550

Brett Hastings: Go actually that's really right up your alley.

261

00:47:21.030 --> 00:47:27.990

Jodi Hunt: yeah I think I already addressed this one, but we are very sensitive to that bald eagles nest.

262

00:47:29.340 --> 00:47:35.610

Jodi Hunt: it's it's not a secret that it's there, nobody has any intention of harming the eagle.

263

00:47:36.960 --> 00:47:39.930

Jodi Hunt: we're saying well outside of a half mile.

**Correction: our project will be about 1200 feet from the eagle's nest, not a half mile.

264

00:47:41.280 --> 00:47:44.790

Jodi Hunt: Nothing will be any closer than that to that eagle's nest.

265

00:47:46.740 --> 00:47:47.790

Brett Hastings: still be able to go fishing.

266

00:47:50.010 --> 00:47:51.270

Jodi Hunt: we're not going to bother him.

267

00:47:53.280 --> 00:48:01.650

Neely Kelley: What limitations, will there be to hunting, in particular, dear since the area targeted is too many.

268

00:48:03.330 --> 00:48:04.590

Brett Hastings: So the.

269

00:48:05.760 --> 00:48:11.250

Brett Hastings: The the proposed project is only proposed for lands that are owned by the Somerset.

270

00:48:12.540 --> 00:48:23.070

Brett Hastings: Company so i'm pretty sure all those lands are currently posted now, so I don't think there'll be any effect or impact with regards to hunting, I mean.

271

00:48:23.790 --> 00:48:32.250

Brett Hastings: If there's going to be a solar project next to you know you want to be safe when you're hunting, obviously, if you're wanting your neighborhood or roads or cars or solar panels, or whatever you want to know what's.

272

00:48:32.910 --> 00:48:43.500

Brett Hastings: You know, safe downrange with your shot, but I think any further limitations will be placed on hunting, because I believe all of that ground is already posted.

273

00:48:45.840 --> 00:48:46.530

Neely Kelley: Thank you Brett.

274

00:48:47.730 --> 00:48:49.680

Neely Kelley: How many viewers of this webinar.

275

00:48:54.810 --> 00:48:57.090

Neely Kelley: Nearly that might be why don't we go ahead.

276

00:48:57.090 --> 00:49:01.650

Neely Kelley: And answer I can go ahead and answer that So if you go to the there are.

277

00:49:03.630 --> 00:49:19.620

Neely Kelley: Trying to subtract 19 Community participants of the webinar tonight and actually You can check that yourself, I believe, if you go to the view options at the top of your screen there's a down arrow and you click on that you can see, the number of participants.

278

00:49:22.260 --> 00:49:29.430

Neely Kelley: next question 32,000 gigawatts but what capacity factor.

279

00:49:31.980 --> 00:49:34.650

Brett Hastings: So 32,000 gigawatts is.

280

00:49:35.700 --> 00:49:37.680

Brett Hastings: You know the total as.

281

00:49:39.270 --> 00:49:49.590

Brett Hastings: Project load our capacity, excuse me so it's going to have a range different different pieces of equipment have or generation equipment have different capacity factor so.

282

00:49:50.760 --> 00:49:55.290

Brett Hastings: Honestly i'm not quite sure your range from low 20s up to.

283

00:49:56.430 --> 00:50:00.270

Brett Hastings: 100% on uncertain bigger projects so.

284

00:50:01.740 --> 00:50:02.970

Brett Hastings: Hopefully that answers a question.

285

00:50:04.260 --> 00:50:10.650

Neely Kelley: Thank you very much um next question how much was eight yes involved in developing the.

286

00:50:11.970 --> 00:50:13.740

Neely Kelley: See process.

287

00:50:15.060 --> 00:50:16.740

Mike Farrell: yeah I can I can try to take that one breath.

288

00:50:17.550 --> 00:50:17.940

Brett Hastings: yeah sure.

289

00:50:19.830 --> 00:50:21.330

Mike Farrell: it's very quickly, not at all.

290

00:50:22.530 --> 00:50:32.340

Mike Farrell: We We obviously are you know we follow your permitting in the state or members of ace New York and we obviously followed the you know, looking at the.

291

00:50:33.900 --> 00:50:42.450

Mike Farrell: Looking at the Rules as they were posed back in early 2020 and spoke to become about them, but we weren't part of the developing the process.

292

00:50:44.040 --> 00:50:45.150

Mike Farrell: directly in any way.

293

00:50:46.260 --> 00:50:47.520

Mike Farrell: we've just been following it since.

294

00:50:50.160 --> 00:50:57.480

Neely Kelley: Will the two to three equivalent jobs be from the local workforce what is an equivalent job.

295

00:51:00.060 --> 00:51:01.980

Mike Farrell: yeah Brett you want to take that.

296

00:51:02.400 --> 00:51:04.200

Brett Hastings: Sure sure so.

297

00:51:05.250 --> 00:51:17.640

Brett Hastings: Equivalent is a full time equivalent it just means to full time job full time role and, yes, we will be soliciting local folks folks that might be interested in in working in the solar industry as.

298

00:51:19.410 --> 00:51:20.520

Brett Hastings: an operator operators.

299

00:51:21.720 --> 00:51:27.900

Brett Hastings: and maintenance folks so yeah there will be the opportunity for local folks to interview for the jobs absolutely.

300

00:51:30.840 --> 00:51:32.730

Neely Kelley: When will we see the pit.

301

00:51:34.500 --> 00:51:35.220

Mike Farrell: yeah I can take.

302

00:51:35.910 --> 00:51:43.740

Mike Farrell: A good question so so right now, a little bit different approach with 94 see the way that DPS handles the document management system.

303

00:51:44.790 --> 00:51:54.180

Mike Farrell: In Article 10 you kind of kicked off the article 10 process with the pip and that kind of opened up a case number that you could follow publicly 94 c's a little bit different.

304

00:51:55.380 --> 00:52:01.500

Mike Farrell: And so the the documents will become available when we submit the when we submit the application because that's what will actually have a.

305

00:52:02.670 --> 00:52:08.280

Mike Farrell: Case order number from or, as in order for people to log on and kind of publicly see all the documents.

306

00:52:12.000 --> 00:52:17.280

Neely Kelley: How far is the proposed town park from the bald eagles nest.

307

00:52:18.900 --> 00:52:23.280

Mike Farrell: yeah i'll start up with me God or josh or somebody can chime in.

308

00:52:25.110 --> 00:52:31.320

Mike Farrell: You know I don't know if we have the measurements for that obviously we're staying we're not we're not building anywhere near the town park.

309

00:52:31.770 --> 00:52:42.420

Mike Farrell: Where obviously more than far enough away from actually where the bald eagle is located so we're signing you know, with the appropriate distance from both the eagle and we're obviously not building in the park so.

310

00:52:44.100 --> 00:52:57.330

Mike Farrell: And also, I guess, we also have to be you have to be careful about revealing specific information certainly about endangered species, for obvious reasons for the safety of the species as well, so I think.

311

00:52:58.770 --> 00:53:11.670

Mike Farrell: You know, you can look at a map and probably get a decent idea, but I don't know if we should provide any additional information about how far away, it is safe to say that we're building with sufficient distance I know God or josh want to add any color but.

312

00:53:15.180 --> 00:53:24.120

Neely Kelley: All right, thank you very much Mike is not 94 see much more favorable toward developers than Article 10.

313

00:53:25.980 --> 00:53:30.270

Mike Farrell: i'll i'll start that in me Steve or someone can can chime in.

314

00:53:31.830 --> 00:53:38.280

Mike Farrell: I don't I don't think I think there are some conditions that, on the face of it, look look potentially more favorable.

315

00:53:39.510 --> 00:53:48.360

Mike Farrell: I think, looking at both process they're both extremely robust process that requires a significant amount of work Steve went through the contents of the united foresee application.

316

00:53:49.290 --> 00:53:54.690

Mike Farrell: One thing that's important for us is to engage with the public and the communities where we're doing projects.

317

00:53:55.170 --> 00:54:03.780

Mike Farrell: and making sure we're taking those concerns, I think we've we've already sort of demonstrated some of that and going from kind of the open house to get here, and will continue to do so.

318

00:54:04.830 --> 00:54:19.470

Mike Farrell: Because we value our neighbor relationships, so I don't think it's it's it's a very hard question to answer as far as much more favorable it's it's early in the process and it's a very robust process certainly compared article 10 but Steve maybe you want to add to the caller.

319

00:54:20.070 --> 00:54:32.310

Steve Wilson: ID I agree what you said and I don't think you could use the word favorable 94 C was passed to address a lot of the issues that article 10 had.

320

00:54:33.150 --> 00:54:46.200

Steve Wilson: That would create bottlenecks and cause projects to be under review for six years, so 94 see it if you on the application exhibit list still requires all the same information is Article pen.

321

00:54:47.640 --> 00:54:51.690

Steve Wilson: It just as far as a process, made it better.

322

00:54:53.100 --> 00:55:07.110

Steve Wilson: To to go from start to finish building on and the difficulties that article 10 had but I don't think favorable it that it's any more favorable towards developers, it still requires all the same information, all the same studies.

323

00:55:08.220 --> 00:55:09.660

Steve Wilson: same intervene or funding.

324

00:55:10.770 --> 00:55:16.740

Steve Wilson: So it's it's just a different process, but not necessarily any lighter or easier than Article 10 would have been.

325

00:55:20.550 --> 00:55:24.990

Neely Kelley: permits have been denied under Article 10 and 94 see.

326

00:55:27.240 --> 00:55:29.970

Mike Farrell: I start that and maybe Steve you can comment.

327

00:55:31.140 --> 00:55:41.520

Mike Farrell: I don't think I can actually answer that question, I think the I think 94 C is too early in the process to know if anything's been denied under there and Article 10 I mean.

328

00:55:42.420 --> 00:55:59.250

Mike Farrell: Look, the process started a little over 10 years ago and I don't think any any project that went through Article 10 is actually operating today as of yet so I don't know if anything it works, you know accepted it we're moving our way through that process but Steve Maybe you can.

329

00:55:59.310 --> 00:56:00.120

add some color.

330

00:56:01.170 --> 00:56:11.160

Steve Wilson: Well there's been two versions of article 10 there was an article X one X stood for 10 under the public service loan and then there was the article 10 the number that was passed in 2012.

331

00:56:11.730 --> 00:56:19.770

Steve Wilson: I am back in the early 2000s had a project tonight, under Article X down in brooklyn so I know one project that's been denied.

332

00:56:21.570 --> 00:56:31.170

Steve Wilson: there's not a lot of projects that get denied under Article 10 I think they get to a point in the process where they realize that they're never going to get a sighting permit.

333

00:56:31.650 --> 00:56:39.480

Steve Wilson: And they just withdraw the application, rather than get to a point where the sighting board actually came out and said we denied your APP we deny your application.

334

00:56:39.870 --> 00:56:53.730

Steve Wilson: So there's not a lot of denials, but if you go back and look, I think there was a lot of withdrawn applications for projects that didn't go forward in like you're right under 94 see it's too new of a process.

335

00:56:55.500 --> 00:57:03.390

Steve Wilson: there's two and and there could be three but there's as far as I remember there's only two projects that have received a setting permanent or 94 see.

336

00:57:03.810 --> 00:57:12.180

Steve Wilson: And those two projects transferred over from Article 10 and they were well into the article 10 citing process I believe they met applications filed.

337

00:57:12.450 --> 00:57:25.170

Steve Wilson: So they pretty much jumped in at the middle of the 94 see process and they've received permits but otherwise there's a lot of applications pending in and they just haven't gotten very far yet, I think.

338

00:57:25.740 --> 00:57:41.010

Steve Wilson: I think most of the applications that are pending before over is right now we're still in the back and forth deficiency supplement phase so so I guess that's a long answer to the question, but there have not been any permits to 994 see because it's too early.

339

00:57:43.590 --> 00:57:58.140

Neely Kelley: Okay, thank you very much, why would hearings not be required under 94 see middle row right most and I don't I don't maybe that's referring to the slide.

340

00:58:00.030 --> 00:58:02.970

Mike Farrell: Yes, Steve the box, it was like nine boxes.

341

00:58:05.250 --> 00:58:05.910

To that one.

342

00:58:08.010 --> 00:58:12.480

Steve Wilson: Which is the difference, I think the simple answer to the question is there's going to be.

343

00:58:12.510 --> 00:58:17.940

Steve Wilson: At a point in the preceding middle row yeah.

344

00:58:19.290 --> 00:58:20.700

Steve Wilson: i'd have to go back and look at the regs.

345

00:58:20.820 --> 00:58:21.420

Neely Kelley: I see.

346

00:58:21.840 --> 00:58:24.660

Steve Wilson: yeah there's there's a point in the proceeding where.

347

00:58:26.010 --> 00:58:30.480

Steve Wilson: there's issue statements submitted and i'm not sure if that's the exact correct terminology.

348

00:58:31.980 --> 00:58:36.870

Steve Wilson: In and then the AJ will look to see if there's any material issues that need to be litigated.

349

00:58:37.890 --> 00:58:58.290

Steve Wilson: If there is, for instance, a solar facility being built in a host municipality and everybody loves the project and there's no issues submitted by the public or municipality, then there would be no issues, determination and it would just go on to an onerous citing permit, so I guess it's.

350

00:58:59.460 --> 00:59:12.630

Steve Wilson: that's that would be the difference would be you know, depending on what comments are submitted in in whether or not those comments raised the material issue of fact that would that would determine whether hearing is required.

351

00:59:15.420 --> 00:59:24.330

Neely Kelley: Okay, thank you very much, I think that is a segue into the next question of what value is public comment.

352

00:59:25.980 --> 00:59:27.360

Mike Farrell: Well i'll i'll take that one.

353

00:59:29.490 --> 00:59:34.890

Mike Farrell: I understand the concern with over as a 94 see.

354

00:59:36.900 --> 00:59:50.760

Mike Farrell: As far as the permitting we're aware of that that dynamic I think what we've shown is that we've already indicated, changes to the project from how we originally intended, the project to be based on public comment and feedback.

355

00:59:51.870 --> 00:59:58.650

Mike Farrell: we've engaged stakeholders early and often and try to get their thoughts about how the project should be accomplished.

356

00:59:59.940 --> 01:00:14.070

Mike Farrell: And through that through that engagement and through that feedback we've been able to sort of you know, adjust the project to sort of meet you know certain stakeholders requirements, so I think I think that the the value of public comment is very high, and I think.

357

01:00:15.150 --> 01:00:25.320

Mike Farrell: I think the you know we welcome our relationship with the Community and further feedback, of how we can sort of potentially adjust the project to take in other stakeholders needs.

358

01:00:28.770 --> 01:00:40.560

Neely Kelley: Thanks Mike okay so just just so folks know we're right at seven o'clock we have about 13 more 13 questions presently so we're just going to keep going.

359

01:00:41.940 --> 01:00:53.910

Neely Kelley: Again, if folks need to sign off you're welcome to we will get the video and the presentation slides, as well as the transcript for the answers to the questions posted as soon as possible.

360

01:00:55.230 --> 01:01:00.060

Neely Kelley: So the next question is our local laws ever not overruled.

361

01:01:02.700 --> 01:01:04.290

Mike Farrell: i'll start that and then Steve you can.

362

01:01:04.320 --> 01:01:16.890

Mike Farrell: chime in again I think it's I think it's very, very early in the process to be able to comment on what oh resin any foresee will they won't do so Steve Maybe you can add some color.

363

01:01:17.790 --> 01:01:27.480

Steve Wilson: yeah I have not had an application get that far, to the point where always has or has not waive any local substantive requirements.

364

01:01:28.920 --> 01:01:36.480

Steve Wilson: It if it happened in another proceeding it's it's not a project i'm working on, and I could only refer you.

365

01:01:37.650 --> 01:01:44.760

Steve Wilson: back to the old rez to the other projects on your website to see what they've done in it that would that would be in the final permit.

366

01:01:45.300 --> 01:02:02.280

Steve Wilson: there'll be discussion of the request for local waivers and there may be an over as a company determination on that, but you'd have to go back and look at the other cases, but no, I am not aware of it, and I have not been involved in anything like that yet so i'm sorry I can't comment.

367

01:02:05.340 --> 01:02:12.480

Neely Kelley: What happens if, as in the Community can't come to a negotiated agreement for benefits to the Community.

368

01:02:15.030 --> 01:02:17.370

Mike Farrell: yeah i'll start that one.

369

01:02:19.170 --> 01:02:27.840

Mike Farrell: yeah it's it's a good question I think we're we're looking at you know if these are benefits to the Community with regards to.

370

01:02:28.350 --> 01:02:41.820

Mike Farrell: You know host community agreement potentially attacks arrangement we've got a rails to trails we've got a lot of other things kind of going on, I think it's in it's in the best interest of both parties to come to a negotiated agreement so.

371

01:02:43.350 --> 01:02:49.680

Mike Farrell: You know the if you can't come to negotiate agreement i'm not sure what happens to be honest, but I think it's in the best interest of both parties.

372

01:02:50.520 --> 01:03:01.770

Mike Farrell: If the if the project is going forward that we we make sure that we're we come to an agreement, so not the best answer, I understand, but I don't think I don't expect it to come to that.

373

01:03:03.660 --> 01:03:12.540

Neely Kelley: Thanks Mike what happens to the solar panels and batteries once the facility is no longer economically viable Where do they go.

374

01:03:14.580 --> 01:03:15.780

Mike Farrell: yeah Brett you want to take that one.

375

01:03:16.980 --> 01:03:17.370

Brett Hastings: Certainly.

376

01:03:18.450 --> 01:03:19.020

Brett Hastings: yeah so.

377

01:03:20.310 --> 01:03:26.160

Brett Hastings: Currently, the manufacturers that that create these pieces of equipment are.

378

01:03:27.600 --> 01:03:29.490

Brett Hastings: Building recyclable.

379

01:03:31.020 --> 01:03:38.160

Brett Hastings: are actually recycling these projects, so they they typically solar panels during the during the operational period.

380

01:03:39.480 --> 01:03:51.270

Brett Hastings: don't fail, but you know every once in a while we'll get cracked or broken or something to that effect, and you know operations, a maintenance team is aware of that will package up and send it back to the manufacturer to be recycled.

381

01:03:54.060 --> 01:03:54.780

Brett Hastings: and

382

01:03:56.430 --> 01:03:58.590

Brett Hastings: let's see we're talking about solar panels.

383

01:04:00.180 --> 01:04:05.160

Brett Hastings: yeah I think that that pretty much answers that question les mills has more color they want to add.

384

01:04:06.540 --> 01:04:09.660

Mike Farrell: yeah I just want to say thanks Brett I just want to say that I mean.

385

01:04:10.830 --> 01:04:20.700

Mike Farrell: You know, typically the panels are designed for design life with 25 plus years and that's what we're going into it sort of looking at that, and we also provide financial security for decommissioning.

386

01:04:21.720 --> 01:04:24.450

Mike Farrell: As required into the 94 see regulations so.

387

01:04:27.600 --> 01:04:30.180

Brett Hastings: yeah actually that's a good that's a good point to you know there's.

388

01:04:31.770 --> 01:04:49.410

Brett Hastings: there's a lot of current research being done into you know new alternative recycling programs as well, and you know we're we're confident that you know over these next 25 to 30 years that there'll be some robust other recycling opportunities and options for these projects as well.

389

01:04:51.300 --> 01:04:53.850

Neely Kelley: Sorry, no that's okay thanks Brett.

390

01:04:55.140 --> 01:05:03.450

Neely Kelley: next question was not Tetra tech instrumental in guiding New York state to favor developers in establishing the 94 see regulations.

391

01:05:05.790 --> 01:05:07.290

Jodi Hunt: I can, I can take that one.

392

01:05:08.790 --> 01:05:19.680

Jodi Hunt: yeah so Tetra tech know we we were not involved in doing anything that would have been either for or against developers and in working with friends.

393

01:05:20.340 --> 01:05:29.430

Jodi Hunt: What I would like to make clear is that Tetra tech is a multinational company with 10s of thousands of people.

394

01:05:30.090 --> 01:05:47.520

Jodi Hunt: With dozens of different business units and what that means for I guess a short and sweet answer this question is that the business units involved with working with us and and not only.

395

01:05:48.540 --> 01:05:50.940

Jodi Hunt: Those business units within Tetra tech but.

396

01:05:52.230 --> 01:05:54.840

Jodi Hunt: consultants throughout New York state.

397

01:05:56.460 --> 01:06:06.090

Jodi Hunt: we're not the same business units, as are working with developers on projects, so there is a conflict of interest.

398

01:06:06.360 --> 01:06:18.630

Jodi Hunt: That would come of that sort of situation where, if Tetra tech work to have the same group of people working with developers on on designing and permitting.

399

01:06:19.020 --> 01:06:31.050

Jodi Hunt: applications and that that same group was working with arrest to develop regulations that would be a massive conflict of interest and that absolutely is not in did not happen.

400

01:06:33.960 --> 01:06:34.770

Neely Kelley: Thank you Judy.

401

01:06:36.030 --> 01:06:39.570

Neely Kelley: next question what is a visually sensitive resource.

402

01:06:41.370 --> 01:06:43.500

Brett Hastings: Actually jodi if you want to take that one.

403

01:06:45.540 --> 01:06:53.340

Jodi Hunt: yeah it's kind of a loose term right, so what we mean is, it could be anything from school to a church to a.

404

01:06:54.390 --> 01:07:09.420

Jodi Hunt: home across the street it doesn't have to mean anything specific it is anything that that the Community feels that oh rose feels or that we think may be sensitive to the change in the area.

405

01:07:10.560 --> 01:07:11.370

essentially.

406

01:07:14.490 --> 01:07:20.130

Neely Kelley: What is your anticipated sound level from the project without leaves.

407

01:07:22.590 --> 01:07:24.360

Brett Hastings: Today, I think you touched on this a little bit in your.

408

01:07:25.530 --> 01:07:27.870

Brett Hastings: Presentation you want to just summarize.

409

01:07:28.620 --> 01:07:40.440

Jodi Hunt: yeah right, I did so typically we haven't modeled this project, yet, but from experience and from from having modeled hundreds of projects.

410

01:07:40.950 --> 01:07:53.760

Jodi Hunt: We typically at a fence line of a project are very quiet so likely quieter than what we're all being right now, and that would be if you were standing right at the fence line of the facility.

411

01:07:55.080 --> 01:08:02.730

Brett Hastings: yeah and you know just a couple more things you know these projects are designed, you know even.

412

01:08:03.810 --> 01:08:13.200

Brett Hastings: The the motors that that the drive the panels are moving so slow they produce little to no noise, the only real noise that's that's typically.

413

01:08:14.130 --> 01:08:24.840

Brett Hastings: produced comes out of the inverters fans cooling fans that come out of the inverters and and those are specifically located as far as possible from.

414

01:08:25.860 --> 01:08:29.310

Brett Hastings: From those from those sound modeled.

415

01:08:31.050 --> 01:08:34.620

Brett Hastings: homes and locations sensitive locations.

416

01:08:37.590 --> 01:08:56.280

Neely Kelley: Okay, thank you so just it's almost 710 we have about 10 questions left for now some more may come in so we're again just going to keep going next question how well does modeling reflect real life results.

417

01:08:59.790 --> 01:09:04.980

Brett Hastings: i'm assuming they're talking about cell modeling so Jody if you want to handle that one.

418

01:09:05.970 --> 01:09:13.500

Jodi Hunt: yeah I guess I don't know how to how to put a number on that I, I will admit I am not a sound engineer.

419

01:09:13.800 --> 01:09:33.120

Jodi Hunt: And we have specialists within Tetra tech that that do that modeling and we would be glad to provide that information if that's possible Mike and Brett I would say that it is fairly or fairly to very accurate, otherwise it wouldn't be useful right.

420

01:09:34.230 --> 01:09:36.180

Brett Hastings: Right right or as wouldn't ask for it.

421

01:09:37.980 --> 01:09:43.590

Brett Hastings: And you know will be held, you know to be compliant with all those regulations as well during operations.

422

01:09:46.500 --> 01:09:52.170

Neely Kelley: Okay next question when will the back taxes be paid on the property.

423

01:09:54.480 --> 01:09:56.190

Brett Hastings: Like any information.

424

01:09:57.510 --> 01:10:10.920

Mike Farrell: I can take that one, I think we should be clear about our kind of relationship with the site I can't comment on the back taxes, we are not the owner of the site we're not buying the land of the site, we are leasing it from the from the site owner.

425

01:10:12.120 --> 01:10:20.190

Mike Farrell: Obviously it's a working very closely with them, but it's we have no no comment on the back taxes.

426

01:10:22.260 --> 01:10:27.750

Neely Kelley: Okay, thanks Mike next question is there any battery storage planned for the project.

427

01:10:29.220 --> 01:10:32.160

Mike Farrell: yeah I mean i'll take it somewhere else.

428

01:10:33.300 --> 01:10:41.370

Mike Farrell: No, there was no battery storage plan that was actually another area that I forgot to mention earlier that was we received some feedback from the Community.

429

01:10:42.750 --> 01:10:47.490

Mike Farrell: about the concerns about battery storage and i'll i'll be.

430

01:10:48.030 --> 01:11:01.740

Mike Farrell: completely honest, that was not the only contributing factor, but it was part of our reason for dropping storage at the project we look at a combination of factors both Community engagement and economics, etc, and the project will not have battery storage.

431

01:11:03.330 --> 01:11:17.340

Mike Farrell: I also want to address something quickly that you know I know there's obviously some concerned about wind farms being built in the project area or potentially even on this project site that absolutely is not happening.

432

01:11:18.600 --> 01:11:30.150

Mike Farrell: We have no intentions of building any wind projects on this project site, the project that we're talking about today, and the only project we're going to be doing is the solar project so just want to make that clear.

433

01:11:32.850 --> 01:11:33.480

Neely Kelley: Thanks Mike.

434

01:11:34.950 --> 01:11:37.470

Neely Kelley: How many solar panels are involved.

435

01:11:39.510 --> 01:11:48.870

Brett Hastings: Based based on the size of the project, the preliminary design that we have right now it's about 300,000 actually 300,025, to be exact.

436

01:11:51.720 --> 01:11:55.770

Neely Kelley: What is the LIFE expectation of solar paint.

437

01:11:56.880 --> 01:11:59.640

Neely Kelley: Life expectations of the solar panels.

438

01:12:01.140 --> 01:12:09.900

Brett Hastings: But 25 to 30 years is as Mike mentioned earlier, if they keep year over year they keep getting better and better and last longer so.

439

01:12:10.920 --> 01:12:13.590

Brett Hastings: But at this point 25 to 30 years is expected life.

440

01:12:16.170 --> 01:12:16.620

Neely Kelley: Okay.

441

01:12:18.060 --> 01:12:22.230

Neely Kelley: Well, any panels being located on the landfills.

442

01:12:25.890 --> 01:12:26.820

Brett Hastings: So, yes.

443

01:12:27.900 --> 01:12:28.590

Mike Farrell: I can take that one.

444

01:12:30.300 --> 01:12:35.340

Mario Rice: yeah they will so in the south eastern part of the.

445

01:12:37.200 --> 01:12:41.220

Mario Rice: Project location there, there will be fixed tilt panels there.

446

01:12:42.360 --> 01:12:47.910

Mario Rice: The most northern portion of the landfill that the Northeast portion of the project site, there will not be panels.

447

01:12:48.930 --> 01:12:59.790

Mario Rice: That is kind of the the big firm that's the tallest point, point in Niagara county so there will be no panels there but panels on the South landfill area over there.

448

01:13:04.710 --> 01:13:05.040

Neely Kelley: Okay.

449

01:13:06.480 --> 01:13:22.260

Neely Kelley: We just had a windstorm with excuse me 65 to 70 mile per hour winds, as I understand it, solar panels are structured to withstand 50 to 50 mile per hour winds how we prevent solar panels from cartwheeling across Somerset in the future.

450

01:13:24.630 --> 01:13:41.790

Mike Farrell: yeah I could I can take that and i'm not an engineer, but i've asked to members of our team and the solar of the racking design is actually designed for 105 mile per hour winds per se seven to 10 risk category one so.

451

01:13:45.060 --> 01:13:47.190

Mike Farrell: I don't necessarily know what all that means, but I see.

452

01:13:49.530 --> 01:13:53.490

Mike Farrell: Some that's what that's a design so interesting.

453

01:13:55.410 --> 01:14:12.810

Neely Kelley: next question at the town board meeting Somerset solar indicated that 20 megawatts of battery storage were planned for the project, then at the Community information session, when I asked about it, I was told that no battery storage will be included which is it.

454

01:14:14.610 --> 01:14:21.000

Mike Farrell: yeah maybe that was asked just before I just answered that question, there is no battery storage at the project.

455

01:14:22.410 --> 01:14:24.180

Mike Farrell: or no plan to the project.

456

01:14:26.220 --> 01:14:26.670

Neely Kelley: Okay.

457

01:14:28.050 --> 01:14:38.520

Neely Kelley: And another another question about Tetra tech just was touch was not Tetra tech involved with the New York state in developing the new 94 see regulations, yes or no.

458

01:14:41.790 --> 01:14:49.230

Jodi Hunt: After attack as a company, along with multiple consulting firms within New York state yes.

459

01:14:50.970 --> 01:14:55.500

Jodi Hunt: But again, but again I, this is not a simple, yes or no question.

460

01:14:56.670 --> 01:15:01.260

Jodi Hunt: Nobody that is working on this application was involved.

461

01:15:03.690 --> 01:15:04.170

Extra.

462

01:15:07.800 --> 01:15:17.550

Neely Kelley: Okay, I think we have reached the end of our questions I don't believe any have come in through email either.

463

01:15:20.880 --> 01:15:25.740

Neely Kelley: I think we are about ready to wrap it up unless unless a couple more questions come in.

464

01:15:26.760 --> 01:15:38.040

Neely Kelley: And again, we thank everyone for taking time out of what i'm sure you're busy holiday planning schedules and joining us this evening and we again look forward to connecting with you.

465

01:15:38.820 --> 01:15:50.940

Neely Kelley: In person in the future and are accessible for to answer questions have a chat about the project and here is our how you can get in touch with us.

466

01:15:51.540 --> 01:15:54.540

Mike Farrell: yeah, we welcome the feedback from the Community.

467

01:15:55.650 --> 01:15:57.330

Mike Farrell: Certainly reach out to us, thank you.

468

01:15:57.360 --> 01:15:58.680

Brett Hastings: Thanks very much reach out anytime.

469

01:16:00.420 --> 01:16:00.780

Neely Kelley: alright.

470

01:16:03.060 --> 01:16:04.230

Neely Kelley: Have a good evening everyone.

Somerset Solar Virtual Community Meeting Q&A

December 15, 2021

- 1. Are you still considering placing panels outside the current fenced area of the plant north of Route 18? If so, what percent of capacity is planned outside the fence?**

At this point, we are looking at putting approximately 65% of the panels above Route 18, and the rest to the south of Route 18. The preliminary project layout displayed on slide 11 of the [Virtual Community Meeting slide deck](#) can be referenced as a visual supplement to this answer.

- 2. What is the design capacity factor for this facility? What is the capacity factor of the panels arranged to track the sun vs. those which are on stationary mounts?**

Capacity factors for solar projects are typically in the low 20s, and the capacity factors for projects utilizing different technologies (ex. different types of racking) vary a bit depending on where the project is geographically located. Low to mid-20s is a typical capacity factor target range for solar projects in New York, including this project.

- 3. What size and type of trees are you planning to plant, and how many rows?**

The vegetative screening will be a mixture of evergreens and shrubs. There are specific requirements for how many trees, spacing, and best management practices for landscaping. We will be meeting with the town when the landscaping design plan is put together, and will also be putting this plan together in collaboration with ORES and in compliance with the requirements of 94-c.

- 4. What will be your setback (of any construction or transportation operation) from the bald eagle nest on the property?**

Our construction will be about 1200 feet away from the eagle's nest. * The Somerset Solar project will comply with the state issued guidelines related to the bald eagle nest and solar facility construction. We are well outside of the setbacks required by the regulations, and there will be significant forest, visual and noise buffer between our construction and the nest location. AES has signed an NDA with NYS ORES and the DEC, and these entities have been made aware of the nesting location.

**This is a correction to the answer that was given verbally during the Virtual Community Meeting. The live response was that all operations would be more than 0.5 miles from the eagle's nest. This was a misstep, and we apologize for the incorrect information. We are very sensitive to the bald eagle's nest and will be taking all necessary precautions to avoid any impact.*

5. What limitations will there be to hunting? Deer in particular, since the area targeted is home to many.

This project is only proposed for lands that are owned by the Somerset Operating Company, and it is our understanding that all these lands are currently posted, so we don't anticipate any effect or impact with regards to hunting. If you are hunting near solar panels, or in your neighborhood, or near roads, cars etc., you will want to know what's safe downrange with your shot. Apart from that, it is not our understanding that any further limitations will be placed on hunting.

6. Please supply a schedule for the project.

The expected project schedule can be found on slide 10 of the meeting presentation, available [here](#).

7. How many viewers of this webinar?

19 viewers (not including panelists or other AES project team members).

8. 32 thousand GW, but what capacity factor?

32 GW (equivalent to 32,000 MW) is the total (sum) capacity of all of AES' operating projects, referenced on slide 6 of the presentation. AES' entire portfolio of operating projects includes gas, oil and coal plants, in addition to renewable projects such as solar. These different projects and different pieces of generation equipment have different capacity factors, ranging from the low 20s on some projects (ex. solar) up to the 50s for gas peaking plants.

9. How much was AES involved in developing the 94-c process?

Not at all. While we (AES) follow permitting in the state, are members of Alliance for Clean Energy (ACE) New York, followed the development of the rules as they were posed back in early 2020, and spoke to people about this development process, we weren't part of developing the process directly in any way. We have simply been following the 94-c process since its deployment.

10. Will the 2-3 equivalent jobs be from local workforce? What is an "equivalent job?"

Yes – we will be soliciting local folks that might be interested in working in the solar industry as operators and maintenance folks. There will absolutely be the opportunity for local individuals to interview for these jobs. "Equivalent" refers to a "full time equivalent", so "equivalent job" simply refers to a full time job/full time role.

11. When will we see the PIP?

The PIP will be available to the public when we submit the permit application for the project, targeted for Q1 2022. At that time, we will receive a case order number from ORES, which will create a Somerset Solar docket on the DPS document management system and will enable the public to see all project documents. This represents a change from how the document management system was handled under Article 10, where the permit application process began with submission of the PIP, which opened up a case number that you could follow publicly.

12. How far is the proposed town park from the bald eagle's nest?

At the time of this meeting, we don't have those exact measurements. However, we are not building anywhere near the town park. We are more than far enough away from where the bald eagle is actually located, which is to say that we are siting with the appropriate distance from both the eagle's nest and the park in compliance with the 94-c regulations.

We do also have to be careful about revealing specific information about endangered species, for the safety of the species. You can look at a map of the project area and probably get a decent idea of placement and distance. It's safe to say that we're building with sufficient distance.

13. Is not 94-c much more favorable toward developers than Article 10?

The 94-c permitting process is substantially similar to the Article 10 process. The 94-c process contains pre-application public engagement with the local community, pre-application consultations with state agencies and local municipalities, application review, draft permit, hearings and decision, and compliance. If you look at the list of the required application exhibits, 94-c still requires all the same information as Article 10.

Both processes are extremely robust and require a significant amount of work (see the contents of the 94-c application on [slide 20 of the presentation](#)). It is extremely important for us (AES) to engage with the public and the communities where we're developing projects, and make sure that we're taking local concerns into consideration. We've already demonstrated some of that commitment in holding the in-person open house in June and incorporating some of the feedback we received into our current project plan. We'll continue to make ourselves available and listen to folks' concerns and feedback, because we value our neighbor relationships.

Accordingly, it cannot be said that 94-c is more favorable to developers than Article 10 from a content or process perspective. 94-c still requires all the same information, all the same studies, and same intervenor funding. It's just a different process, but not necessarily any lighter or easier than Article 10.

94-c was simply passed to address issues related to Article 10 which created bottlenecks and caused projects to be under review for substantial periods of time – sometimes up to six years.

14. How many permits have been denied under Article 10 and 94-c?

There have been two versions of Article 10 -- there was an Article X (where "X" stood for "10" under the Public Service Law), and then there was the Article 10 that was passed in 2012. AES counsel is familiar with at least one project with which they were involved that was denied a permit. There were not a lot of projects that got denied under Article 10 as it was more common for developers to get to a point in the process where they realized that they were never going to get a siting permit and they just withdraw their application, rather than getting to a point where the siting board actually made a decision on the application. So there has not been a lot of denials, but if you go back and look, there were a lot of withdrawn applications for projects that didn't go forward.

Regarding 94-c, it's too new of a process. There are currently only two projects that have received a siting permit under 94-c, both of which already had Article 10 applications filed and transferred over from Article 10, which meant that these projects essentially jumped in at the middle of the 94-c process.

15. Why would hearings not be required under 94-c? (referring to the diagram on [slide 18 of the meeting presentation](#) – the right-most box in the middle row)

Once an application is determined complete by ORES and a draft permit issued, the Administrative Law Judge assigned to the proceeding will determine whether there are any adjudicable issues requiring an evidentiary hearing. The standards for adjudicable issues are contained in Section 900-8.3(c) of the Office's [94-c regulations](#). In general, an adjudicable issue is substantive and significant and can be raised by the Office, an agency or the public. An issue is substantive if there is sufficient doubt about the applicant's ability to meet statutory or regulatory criteria applicable to the project, such that a reasonable person would require further inquiry. An issue is significant if it has the potential to result in the denial of a siting permit, a major modification to the proposed project or the imposition of significant permit conditions in addition to those proposed in the draft permit, including uniform standards and conditions.

16. Of what value is public comment?

We have already made changes to the original project design project based on public comment and feedback. We have engaged stakeholders early and often and have tried to get their thoughts about how the project should be accomplished. Through that engagement and feedback, we've been able to adjust the project to meet certain stakeholders' requirements. The value of public comment is very high, and we value our relationship with the community and welcome further feedback regarding how we can potentially adjust the project to take other stakeholders' needs into consideration.

17. Are local laws ever not overruled?

To AES' and counsel's knowledge, ORES has not refused a request not to apply a local law. However, there have only been three permits for solar projects issued to date and two of the projects did not request that the Office elect not to apply any local laws.

18. What happens if AES and the community can't come to a negotiated agreement for benefits to the community?

The following are just some of the benefits of this project to the community – a host community agreement, rails to trails, a potential tax arrangement – we've got a lot of these kinds of things going on, and we think it's in the best interest of both parties to come to a negotiated agreement. If we can't come to a negotiated agreement, we're not sure what happens, to be honest. We think it's in the best interest of both parties that the project moves forward, and that we come to an agreement. Not the best answer, we know, but we don't expect to not be able to come to an agreement.

19. What happens to the solar panels and batteries once the facility is no longer economically viable? Where do they go?

Currently, the manufacturers that create these pieces of equipment are recycling them. During the operational period of a solar project, panels typically don't fail, but occasionally, one will get cracked or broken, or something to that effect. Our operations and maintenance team consistently monitors the condition of the panels and will package any broken panel up and send it back to the manufacturer to be recycled.

Typically, the panels are designed for a life of 25+ years. We also provide financial security for decommissioning as required in the 94-c regulations.

There's a lot of research being done into new alternative recycling programs as well, and we're confident that over these next 25-30 years there will be some other robust recycling opportunities and options for these projects as well.

20. Was not Tetra Tech instrumental in guiding NY State to favor developers in establishing the 94-c regulations?

No, Tetra Tech was not involved in doing anything that would have been either for or against developers, in working with ORES. Tetra Tech is a multinational company with tens of thousands of people, and dozens of different business units. The business units working with ORES are not the same business units as are working with developers on projects. Also note that consultants throughout New York State were asked for input on the draft Section 94-c regulations. If Tetra Tech, or any consulting firm, were to have the same people working with developers on designing and permitting applications, and working with ORES to develop regulations, that could be considered a conflict of interest, and that absolutely did not happen.

21. What is a visually sensitive resource?

“Visually sensitive resource” is a loose term – it could be anything from school, to a church, to a home across the street from the project. It doesn't have to mean anything specific - it is anything that the community, ORES or we feel may be sensitive to the change in the area.

22. What is your anticipated sound level from the project, without leaves?

We haven't modeled sound levels for this project yet, but from our experience modeling hundreds of these types of projects, sound levels at the fence line of a project (if you were standing right at the fence line of the facility), are typically very quiet, likely quieter than the conversation we are having right now.

The projects are designed to be quiet – even the motors that drive the panels are moving so slowly that they produce little to no noise. The only real noise that's produced comes from the cooling fans for the inverters. These pieces of equipment are specifically located as far as possible from the fence, sound modeled homes and sensitive locations.

23. How well does modeling reflect real life results?

With the assumption that this question is referring to sound modeling, we don't know how to put a number on that at the moment. There are specialists within Tetra Tech that do that modeling and we would be glad to provide that information when possible. We would say that it is fairly accurate to very accurate, otherwise it wouldn't be useful, and ORES wouldn't ask for it. Regardless, we will be held to be compliant with all sound regulations during operations.

24. When will the back taxes be paid on the property?

We should be clear about our relationship with the site. We are not the owner of the site and we're not buying the land of the site – we are leasing it from the site owner. Therefore, we can't comment on the back taxes. We are working very closely with the site owners, but we have no information on the back taxes.

25. Is there any battery storage planned for the project?

No, there is no battery storage planned. We received some feedback from the community regarding concerns about battery storage, and while that was not the only contributing factor, it was part of our reason for dropping the storage component of the project. We looked at a combination of factors, both the community sentiment and the economics, and the ultimate decision was that the project will not have battery storage.

We also want to address something else quickly – we know that there is some concern about wind farms being built in the project area or potentially even on this project site, and we want

to be clear; that absolutely is not happening. We have no intention of building any wind projects on this site. The project that we're talking about today, and the only project we're going to be doing, is the solar project.

26. How many solar panels are involved?

Based on the size of the project and the preliminary design that we have right now, 300,025 panels.

27. What is the life expectation of the solar panels?

As mentioned earlier, 25-30 years is the current expected life. Though, year after year, panels are getting better, and lasting longer.

28. Will any panels be located on the landfills?

Yes. Fixed tilt panels will be located on the landfill area located in the southeastern part of the project area. However, in the most northern portion of the landfill, at the northeast portion of the project site, there will not be. This northeast portion is the tallest point in Niagara county, and there will be no panels there.

29. We just had a windstorm with 65-70 mph winds. As I understand it solar panels are structured to withstand 50-55 mph. How will you prevent solar panels from cartwheeling across Somerset in the future?

The racking design we will be using for this project is designed for 105 mph winds, per ASCE (American Society of Civil Engineers) 7-10 risk category I.

30. At the town board meeting Somerset Solar indicated that 20 MW of battery storage was planned for the project. Then at the community information session when I asked about it, I was told that no battery storage would be included. Which is it?

As mentioned in the response to question #25, there will be no battery storage at the project. The 20 MW of storage originally planned for the project has been removed.

31. Was not Tetra Tech involved with NY State in developing the 94-c regulations? Yes/No

Tetra Tech as a company, along with other parties, reviewed the draft Section 94-c regulations and provided information to support selected public comment responses. It is common for New York State to seek input from experienced professionals in the subject in developing new regulations. The Tetra Tech team that is working on the Somerset project was not involved with NYS in developing the 94-c regulations.

July 21, 2022

Mr. Jon Miller, Chief of Police
Town of Somerset
8700 Haight Road
PO Box 368
Barker, NY 14012

Dear Sheriff Miller,

AES Clean Energy Development, LLC (AES) is proposing to construct the Somerset Solar 125-megawatt AC solar project (the Facility) on approximately 685 acres in the Town of Somerset, Niagara County, New York. The proposed Facility is subject to the rules for siting a major electric generating facility under the Section 94-c Regulations of the New York State Executive Law overseen by the New York State Office of Renewable Energy Siting (ORES).

Currently at a preliminary stage of development, AES is working on completing the Section 94-c Application package for submittal to ORES. The Facility has been designed in a manner to minimize potential impacts to the local community and is not expected to result in public health or safety concerns associated with gaseous, liquid, or solid wastes. Solar energy facilities do not require the use or storage of combustible fuels. The Facility is not expected to result in glare that would cause a significant effect on surrounding areas. Therefore, there are no credible public safety risks associated with the operation of the Facility.

Measures to minimize impacts from the Facility include compliance with the applicable local, state, and/or federal regulations, as well as the commitments made by the Applicant throughout the Section 94-c Application process and in the Siting Permit Conditions approved by the ORES. Additional Facility information is available on the Facility's website at:

<https://www.aes.com/somerset-solar-project>

Section 94-c regulations require collaboration with local emergency responders so that potential adverse impacts can be identified prior to implementation and avoided, minimized, or mitigated to the greatest extent practicable. Due to the location of the facility, AES assumes the Somerset Sheriff's Office would respond, in part, in the unlikely event of an emergency and that the Somerset Sheriff's Office has the appropriate resources and capacity to respond to such emergency. AES is requesting your feedback regarding these assumptions by August 26, 2022 and will be available to discuss the Facility and any potential emergency response requirements with you.

If you have any questions or would like to discuss, please contact me.

Sincerely,

Mario Rice

July 21, 2022

Mr. David Hotaling, Chief of Barker Fire Department
1660 Quaker Road
Barker Fire Hall
Barker, NY 14012

Dear Chief Hotaling,

AES Clean Energy Development, LLC (AES) is proposing to construct the Somerset Solar 125-megawatt AC solar project (the Facility) on approximately 685 acres in the Town of Somerset, Niagara County, New York. The proposed Facility is subject to the rules for siting a major electric generating facility under the Section 94-c Regulations of the New York State Executive Law overseen by the New York State Office of Renewable Energy Siting (ORES).

Currently at a preliminary stage of development, AES is working on completing the Section 94-c Application package for submittal to ORES. The Facility has been designed in a manner to minimize potential impacts to the local community and is not expected to result in public health or safety concerns associated with gaseous, liquid, or solid wastes. Solar energy facilities do not require the use or storage of combustible fuels. The Facility is not expected to result in glare that would cause a significant effect on surrounding areas. Therefore, there are no credible public safety risks associated with the operation of the Facility.

Measures to minimize impacts from the Facility include compliance with the applicable local, state, and/or federal regulations, as well as the commitments made by the Applicant throughout the Section 94-c Application process and in the Siting Permit Conditions approved by the ORES. Additional Facility information is available on the Facility's website at:

<https://www.aes.com/somerset-solar-project>

Section 94-c regulations require collaboration with local emergency responders so that potential adverse impacts can be identified prior to implementation and avoided, minimized, or mitigated to the greatest extent practicable. Due to the location of the facility, AES assumes the Barker Fire Department would respond, in part, in the unlikely event of an emergency and that the Barker Fire Department has the appropriate resources and capacity to respond to such emergency. AES is requesting your feedback regarding these assumptions by August 26, 2022 and will be available to discuss the Facility and any potential emergency response requirements with you.

If you have any questions or would like to discuss, please contact me.

Sincerely,

Mario Rice

July 21, 2022

Mr. Mark Hain, HazMat Officer
5574 Niagara Street Ext.
PO Box 496
Lockport, NY 14095
Mark.Hain@niagaracounty.com

Dear Mr. Hain,

AES Clean Energy Development, LLC (AES) is proposing to construct the Somerset Solar 125-megawatt AC solar project (the Facility) on approximately 685 acres in the Town of Somerset, Niagara County, New York. The proposed Facility is subject to the rules for siting a major electric generating facility under the Section 94-c Regulations of the New York State Executive Law overseen by the New York State Office of Renewable Energy Siting (ORES).

Currently at a preliminary stage of development, AES is working on completing the Section 94-c Application package for submittal to ORES. The Facility has been designed in a manner to minimize potential impacts to the local community and is not expected to result in public health or safety concerns associated with gaseous, liquid, or solid wastes. Solar energy facilities do not require the use or storage of combustible fuels. The Facility is not expected to result in glare that would cause a significant effect on surrounding areas. Therefore, there are no credible public safety risks associated with the operation of the Facility.

Measures to minimize impacts from the Facility include compliance with the applicable local, state, and/or federal regulations, as well as the commitments made by the Applicant throughout the Section 94-c Application process and in the Siting Permit Conditions approved by the ORES. Additional Facility information is available on the Facility's website at:

<https://www.aes.com/somerset-solar-project>

Section 94-c regulations require collaboration with local emergency responders so that potential adverse impacts can be identified prior to implementation and avoided, minimized, or mitigated to the greatest extent practicable. Due to the location of the facility, AES assumes the Niagara County HazMat Team would respond, in part, in the unlikely event of an emergency and that the Niagara County HazMat Team has the appropriate resources and capacity to respond to such emergency. AES is requesting your feedback regarding these assumptions by August 26, 2022 and will be available to discuss the Facility and any potential emergency response requirements with you.

If you have any questions or would like to discuss, please contact me.

Sincerely,

Mario Rice
